Applicator Audit Log Dashboard

Last Modified on 11/23/2026 9:10 am CST

The Applicator Audit Log dashboard honors User restrictions based on login Location.

Purpose

The Applicator Audit Log dashboard gives the ability to look up what jobs a particular Applicator handled during a given date range, in order, to research the reports of adverse effects to neighboring fields.

Data for this dashboard comes from the Agvance Ops app and Agvance SKY Dispatch.

Details

This dashboard only includes Blend Tickets.

Pick an Applicator and a date range as desired. For each job application, the report displays the *Blend Ticket Number*, *Customer Name*, *Field Name*, *Acres*, *Completed Date*, and *Completed Time*.

The *Beginning* and *Ending* date filters available on the dashboard are based on the *Job Completed Date* of the Blend Ticket.

Selecting the Print button navigates to the printable log.

If there are Applicators and/or Vehicles on the job assignment, those Applicators and/or Vehicles are used on the dashboard. If there are not, it uses the Applicators and/or Vehicles from the Blend Ticket.

The dashboard can be filtered by *Blend Ticket Number*, *Applicator*, *Farm Description*, *Blend Ticket Location ID*, *Beginning/Ending Date*, *Vehicle ID*, *Sort By*, *Sort Order*, and *Primary*.

Note: The *Primary?* filter can be used to filter by *Primary*, *Secondary*, or *N/A* (meaning there was no Applicator on the job assignment).

Results are sorted by *Blend Ticket Date Job Completed*.
