# Agvance Dispatch

Connect Dispatch to Your Business

Agvance provides an innovative suite of dispatching tools to deliver more efficient and informed communications across your entire enterprise. The dynamic and responsive dispatch system with enhanced performance and searchability is viewable by list or on a map with optimal viewing from a dual-screen setup.

Easily assign and reorder jobs directly on applicator devices to see your pipeline of work in real-time. This information combined with access to weather data, field boundaries, and driver location maps allows you to communicate job updates to team members and growers, keeping everyone informed every step of the way.

OPTIMIZE YOUR DISPATCH PROCESS

- Give dispatchers and staff vision to all pending customer job applications, deliveries, and work orders
- Identify job locations by a single geo-point or display field boundaries and crop zones
- Organize, prioritize, and schedule jobs using custom filters and priorities that fit your operation
- Assign jobs quickly to applicators and tender drivers for the most effective and efficient routes
- View current locations of applicators and drivers with a bread crumbing trail to see the progress of in-process jobs
- Make critical dispatching decisions from the Schedules View identifying primary and secondary applicators and viewing both field and job information
- Re-assign jobs to a different applicator or quickly reorder jobs by dragging and dropping
- Send multiple jobs in a batch to the automated blender to save time
- Zoom or pan to a desired location on a map to load jobs more quickly for the defined area
- View integrated weather data including current radar, past precipitation, wind maps, and current temps
- View additional map layers including DriftWatch™ for identifying sensitive crop locations and known crop chemistry applications
- Provide view-only access to ancillary staff such as blend shed staff and operations managers so they can see jobs, priorities, and maps

EMPOWER YOUR APPLICATORS & DRIVERS

- Using the Apply app, assigned jobs are immediately available to the applicator and/or driver in a map or list view for review of the assigned route and jobs
- Guide applicators and tender drivers to job locations with turn-by-turn directions based on geo-points
- Enable applicators to set meeting (fill) points for other users (tender drivers) assigned to the same job from the app
- Improve communication by applicators updating the status of each job from their mobile tablet or phone which immediately notifies all connected parties

KEEP CUSTOMERS & SALES STAFF INFORMED

- Using the Inform app, sales staff view real-time job progress so they can keep customers informed
- Improve efficient communication by sales staff easily updating jobs to "Ready" status when customers indicate the fields are ready for application
- Keep customers in the loop and automatically notified by email or text when their jobs are complete
