

# Grower360

Empower & Engage Your Customers

Empower your customers and strengthen grower loyalty with Grower360. Branded to represent your company, customers have live access to their data through our web and native apps.

Grower360 enables customers to quickly see account balances, pay bills and reorder products online. Growers can access field history, request field services, and approve plans. With instant notifications when an application job is complete, growers know when they can get back in the field and back to work. Keep customers informed with in-app, text, and email notifications. Both retail staff and growers appreciate the opportunities for connection and streamlined communication using Grower360.

#### **BALANCE REVIEW**

- Open the app to an overview of balances on three cards: Net Due, Prepay, and Budget Due
- Explore invoices that make up the net due by date, see discounts available by dollar amount, and review balances due by month
- Explore the current amount of pre-paid product and booking details
- Examine the current amount due for budget billing invoices, the budget balance, notes, and filter by due dates

# **ACCOUNT ACTIVITY**

- Start with an overview of recent activity, expand to a full list, and review details
- Export account information including statements, invoices, bookings, and products purchased
- View prepaid and unpaid product bookings, expand details, pay bookings, and view and sign contracts
- Access recent invoices, expand to view invoice detail, and filter by field, invoice number, control number, and paid status
- View all statements and generate volume statement reports on demand
- Review purchased product details including total cost, and filter by field or tank, and date range
- View patronage records including a listing of all equity, stock, and investment totals

#### **PAYMENT DETAILS**

- Make online payments via ACH or credit card
- Pay a net due balance in full, by invoice, or by dollar amount
- Pay a budget due balance or a prepay balance by either booking or dollar amount
- View all payments made toward the account, including regular invoice payments and prepay
- Protect growers from making duplicate payments with visual and text safeguards
- Schedule payments for a future date

#### **FIELD DETAILS**

- View field details including acres, split arrangements, and boundaries with satellite imagery
- Request service on fields and approve or decline new field plans
- Add and edit tillage type and FSA information
- See current weather conditions including wind speed, rainfall totals, and predicted rainfall
- Access mapping layers, including application and harvest data, as well as soil test results
- View filed history including crop years, blend tickets, delivery tickets and invoices

#### **GRAIN**

- Alert growers with notifications when scale tickets are printed
- View and export a list of scale tickets by commodity or assembly sheet
- Generate grain reports including delivered grain, assembly sheets with scale tickets, and grain bank statements
- Capture electronic signatures on open offer contracts and amendments by disposition
- Explore contracts for undelivered units by commodity including received and remaining bushels and delivery end dates
- View and download settlement check information
- View cash bids and the futures page from the retailer or related futures price information

## **ENERGY**

- View tanks, their contents, estimated tank fill percentage, tank size, last fill amount, and date
- Display tank monitor readings from connected data sources
- Utilize recurring payments when budget billing
- Request a tank refill by full tank, number of gallons, or amount of purchase

# **ENHANCED COMMUNICATION**

- Send communications by using SKY notifications to specific classifications of customers via text or email, or in-app notifications
- Growers control their notification preferences
- Send job completion notices to growers and meet government notification requirements when application work is done
- Access to documents shared by the retailer

## **ADDITIONAL FEATURES**

- Sales staff receive notifications through email as growers engage in the portal
- Allow growers to reorder previously ordered products from an invoice, booking, plan, or from the product view
- Growers easily switch between multiple accounts
- Track usage metrics to see features that customers access
- Customize the menu to only display retaileroffered options and a custom link to any website
- Tailor Grower360 to support your company brand with custom themes and logos
- Supported in Chrome and Safari web browsers, as well as Android and iOS operating systems
