# Grower360

Empower & Engage Your Customers

Giving your growers access to their information creates a relationship and improves customer experience. Grower360 is a portal to let customers view their accounts in real-time using mobile, laptop or desktop devices. Growers see past activity and view the details needed to make informed decisions.

Grower360 provides an online transaction system to your business that simplifies customer interactions. At any time, growers can view field boundaries, soil tests, maps, weather data, and a detailed timeline of activity for each field. On the grain side, your customers will have a real-time view of all grain activity in addition to e-signatures on contracts, cash bids, and futures price information.

BALANCE REVIEW

- Open the app to an overview of balances on three cards: Net Due, Prepay, and Budget Due
- Explore invoices that make up the net due by date, see discounts available by dollar amount, and review balances due by month
- Explore the current amount of pre-paid product and booking details
- Examine the current amount due for budget billing invoices, the budget balance, notes, and filter by due dates

ACCOUNT ACTIVITY

- Start with an overview of recent activity, expand to a full list, and review details
- Export account information including statements, invoices, bookings, products, and more
- View prepaid and unpaid product bookings, expand details, pay bookings, and view and sign contracts
- Review recent invoices, expand to view a full invoice list, and filter by field, invoice number, control number, and paid status
- View all statements processed for an account and generate volume statement reports anytime
- Review purchased product details including total cost and invoices and filter by field or tank and date
- View patronage records including a listing of all equity, stock, and investment totals

PAYMENT DETAILS

- Make online payments via ACH or credit card
- Pay a net due balance in full, by invoice, or by dollar amount
- Pay a budget due balance or a prepay balance by either booking or dollar amount
- View all payments made toward the account including regular invoice payments and prepay
- Schedule payments for a future date

FIELD DETAILS

- Monitor field activity, request new field service, accept, decline, or propose new field plans
- View a list of field details with satellite map imagery, boundaries, soil test history
- Send Grower360 notification for all fields when a multifield ticket is completed
- View application, harvest, and soil sample layers shared from SKY Mapping
- See current weather conditions including wind speed, 24-hour rainfall totals, and predicted rainfall
- See split arrangements by field and add specific data such as tillage, and FSA information

GRAIN

- View delivered grain by scale tickets, commodity, or assembly sheets and export
- Generate reports for delivered grain and assembly sheets with scale tickets
- Review open grain offers
- View contracts by disposition and electronically sign
- Explore contracts for undelivered units by commodity including received and remaining bushels and delivery end dates
- View and download settlement check information
- View cash bids and the futures page from the retailer or related futures price information

ENERGY

- View energy tanks, the product, estimated tank fill percentage, tank size, last fill amount and date
- Make recurring payments when utilizing budget billing
- Request a tank refill by full tank, number of gallons, or amount of purchase

ENHANCED COMMUNICATION

- Retailer sends communications by notifications to specific categories of customers via text or email or in-app notification
- Growers set preferences to receive notifications
- Set automatic notifications to be sent for an activity such as the completion of a custom application
- Growers can access shared documents from the retailer

ADDITIONAL FEATURES

- Reorder previously ordered products from an invoice, booking, plan or product
- View blend tickets and delivery tickets
- Switch between multiple customer account views
- Responsive screen size for multiple devices
- Supported in Chrome and Safari web browsers, as well as Android and iOS operating systems
- Track usage metrics to see features customers use from SKY Admin
- Support your company brand with a custom theme
- Customize the menu to only display retailer offered options
- Promote sales and more to your customers with in-app messages
