

Accounting Preferences

Last Modified on 06/21/2024 1:07 pm CDT

The *Preference* area allows several options to be set and therefore customize, to a degree, the way the program works. Quite often, these default settings may be overridden as transactions are being entered.

Note: These preference settings are company-wide, not user specific.

General

- **First Fiscal Month of Year** – Select the first month of the business’s fiscal year. This input is used by the system at end of month to know what fiscal month end is also the calendar year end.
- **Transactional Posting to Inventory Asset Accounts** – Selecting this option causes the posting to the inventory asset accounts to be done as inventory is invoiced, purchased, and at the Inventory Adjustment function. The alternative is to have the Inventory Asset accounts remain constant throughout the month and adjust them to actual before running financial reports. To do this, use the Post Inventory to G/L function.
- **Accrue Estimated Payables for Purchase Receipts** – The value of each Purchase Receipt accrues to the Estimated A/P key account based on the *Estimated Average Cost* from the Purchase Receipt. The inventory departments must be set to use *Estimated Average Costs* for this option to be available. The entry in the general ledger is reversed when the Purchase Invoice is completed.
- **Include consignment products from unprocessed Purchase Receipts when posting inventory value to GL** – The value of the Purchase Receipts for consignment products is included when posting inventory to the general ledger.
- **Include consignment products in current inventory value when posting inventory value to GL** – The value

of the consignment products into the company-owned inventory is included when posting inventory to the general ledger.

- **Print "See Terms on reverse side" on all "Received by" lines**– Choose to print this wording to have terms and conditions preprinted on the back of the delivery documents.
- **Display JDF Multi-Use Numbers** – With this option selected, any JDF Multi-Use numbers display in entirety. With this option deselected, only the last four digits of the JDF Multi-Use numbers display.
- **Counters** – The counter specifications are determined for Delivery Tickets, Purchase Receipts, Manufactured Blends, Inter-Company Transfers, Vendor ACH Batches, and Check File Batches globally or for individual locations. The last document number and the option to auto-number documents are also on this screen.
- **POS Warnings** – This allows customizable point of sale warnings to be established that display during the *Point of Sale* transactions for specified products and/or customer, and optionally stop the sale. For more information on POS Warnings, see [here](#).

Inventory

The screenshot shows the 'Preferences' window with the 'Inventory' tab selected. The window contains several sections of settings:

- Reconcile Estimated Freight:**
 - Reconcile Estimated Freight from P.R.
 - Require AP Bill Creation
 - Require AP Bill to be on Hold
- InvAdj Types:**
 - Require Void reason on Inventory Adjustment
 - Require reason for Return type delivery tickets
- Stop Manufactured Inventory transactions that will result in Negative Amount On Hand of Inventoried Products:**
 - Stop Manufactured Inventory transactions that will result in Negative Amount On Hand of Inventoried Products
- Product Cost warning tolerance %:** 15
- Reconcile Estimated Freight warning tolerance %:** [Empty]
- Grower Order:**
 - Quantity changed to zero and not submitted: Stop
 - Require Salesperson
- PR, PI, Inv Adj, Disallow Lot Number Balance to go Negative:** No Checking
- Department Classifications:** A list of 6 items labeled Misc1 through Misc6.
- Department Cross References:** A list of 4 items labeled Cross Ref1 through Cross Ref4.
- Ignore Lot Number Checking:** 1

At the bottom of the window, there are buttons for 'Counters', 'POS Warnings', 'Save', and 'Cancel'.

Reconcile Estimated Freight

- **Reconcile Estimated Freight from P.R.** – This option looks to the Purchase Receipt instead of the Purchase Invoice to get the amount of estimated freight.
- **Require AP Bill Creation** – Creating A/P Bills at the *Reconcile Freight/Additional Charges* screen is optional unless this is selected. If this option is chosen, creating the A/P Bill is required.
- **Require A/P Bill to be on Hold** – If an A/P Bill is added from the *Reconcile Freight/Additional Charges* screen and this option is selected, the A/P Bill is automatically saved with a *Hold* status.

-
- **Stop Manufactured Inventory transactions that will result in Negative Amount On Hand of Inventoried Products** – When selected, this option does not allow inventory to be manufactured if it will cause the finished good or any raw ingredient to have a negative amount on hand.
 - **Product Cost warning tolerance %** – When saving Purchase Invoices, the new cost per unit is checked against the last cost in the product file. If there is a variance by more than the percentage entered here, a warning is given including a chance to edit the cost before saving. If the last cost is within the tolerance, then the average cost is checked.
 - **Reconcile Estimated Freight warning tolerance %** – Optionally enter the tolerance percentage used when reconciling freight. If an amount is entered, at the *Reconcile Freight/Additional Charges* screen when reconciling and adding an A/P Bill, the variance is checked against this percentage. If the percentage of variance is higher, a message appears warning the variance is greater than the tolerance. It is optional to continue with the save of the transaction.
-

Grower Order

- **Quantity changed to zero and not submitted** – When *Stop* is selected and a quantity on a Grower Order is edited to zero without being submitted to the vendor, the save of the edited Grower Order is not allowed. If *Warn* is selected and the quantity on the Grower Order is changed to zero but not submitted to the vendor, a message appears to confirm if the change should be saved.
 - **Require Salesperson** – When selected, this option requires a salesperson to be selected on the *Grower Orders* window before the save of the Grower Order.
-

- **PR, PI, Inv Adj. Disallow Lot Number Balance to go Negative** – Set to *No Checking*, *Warning Only*, or *Disallow Save*.
 - **InvAdj Types** – Types of Inventory Adjustments may be defined such as *Physical Count* or *Property Maintenance Use*.
 - **Require Void reason on Inventory Adjustment** – Marking this forces a reason to be entered when inventory adjustments are voided. This void reason is then visible on the Inventory Adjustment report and on the Inventory Detail report if the option to *Print Notes* is selected on the *Report Criteria* screen.
-

- **Department Classifications** – Set the user-defined labels for the six classifications of departments. This allows departments to be categorized so reports can be filtered by various classifications (i.e. Run a report for all Seed departments).
-

- **Department Cross References** – Label the cross-reference inputs found at the *Department Profile* tab. These

cross-reference inputs are currently unused but could be used for custom programming or future development.

- **Ignore Lot Number Checking** – Double-click to select a Product Classification for products that are in Inventory Departments requiring lot number checking but do not have lot numbers. The products in this Product Classification will be ignored by the lot number checking process.

Inventory Purchase

The screenshot shows the 'Preferences' dialog box with the 'Inventory Purchase' tab selected. The dialog is organized into three main sections:

- Purchase Order:** Contains checkboxes for 'Place prepaid Purchase Order Bills on Hold', 'Allow only 1 discount date on Purchase Orders', 'Require Terms on PO', 'Restrict PP PO Void', 'Restrict Cost Edit on Received PO Lines', 'Restrict PP PO Order Invoiced Edit', 'Print EPA # on PO line items', 'Require Start and Expire Dates on a PO', 'Allow only 1 Direct Ship Delivery per Product', 'Restrict Price By on Received/Invoiced PO Lines', 'Require GLN on all direct ship POs for electronic vendors', 'Use alternate XML PO interface', and 'Use alternate XML PO validations'. It also includes text boxes for 'Folder to place XML P.O. files', 'Folder to place ASCII P.O. exports', and '<Require Date Requested on PO>'. There are dropdowns for 'Class of Products that may only be purchased via Direct Shipments' and 'Purchase Order Notes', and a button for 'P.O. Pickup / Delivery Locations'.
- Purchase Receipt:** Includes checkboxes for 'Put Location as prefix on PR', 'PR Transfer Out uses Location Information', 'Require PO On PR', 'Restrict Edit of P.O. Price at PR', 'Restrict Over Receiving on Prepaid PO', 'Restrict PR returns on PP PO', and 'Print EPA # on PR line items'. It features dropdowns for 'PO Price Level' (set to 'Average Cost') and 'Freight Validation' (set to 'None').
- Purchase Invoice:** Contains checkboxes for 'Stop PI from over-using PO Prepay', 'Choose PO on From Receipt Tab', and 'Read PI From FTP'. It has options for 'Enable SSL' and 'Use Passive', a 'Format 2' checkbox, a text box for '<PI Import Vendor>', and a dropdown for 'PI Import Conv Attribute'. There is a 'PI Omni Prod. Attributes' section with a '<Name>' dropdown. A checked checkbox 'Include Bill To information on Style 1 PO printout' is followed by a 'Style 1 PO Printout Bill To' section with text boxes for 'Name', 'Email', 'Address', and 'City, State, Zip'.

At the bottom of the dialog, there are buttons for 'Counters', 'POS Warnings', 'Save', and 'Cancel'.

Purchase Order

- **Place prepaid Purchase Order Bills on Hold** – When a prepaid Purchase Order is entered, the A/P Bill created is automatically set to an *On Hold* status if this option is selected.
- **Allow only 1 discount Date on Purchase Orders** – Selecting this option allows only one line to be entered in the *Discount Terms* on the Purchase Order.
- **Require Terms on PO** – At the save of a Purchase Order, vendor terms are verified. If the terms are not entered, the Purchase Order is not allowed to be saved.
- **Restrict PP PO Void** – With this option selected, no prepaid Purchase Orders can be voided.
- **Restrict Cost Edit on Received PO Lines** – Product costs on Purchase Orders are not allowed to be edited for line items that have been received against it if this option is selected.
- **Restrict PP PO Order Invoiced Edit** – Selecting this option restricts users from editing a prepaid Purchase

Order and choosing the Order Invoiced option to close the Purchase Order.

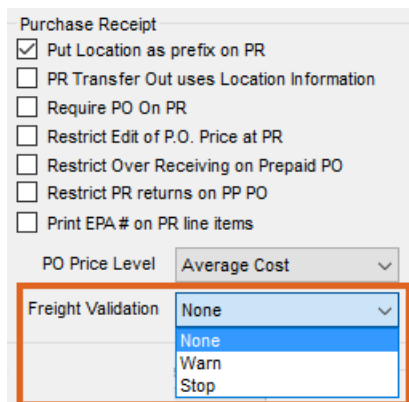

- **Print EPA # on PO line items** – Items with an EPA number on the product file prints the EPA number below the product description on the Purchase Order when this is selected.
- **Require Start and Expire Dates on a PO** – Selecting this option disallows saving a Purchase Order without *Start* and *Expiration Dates* entered.
- **Allow only 1 Direct Ship Delivery per Product** – Selecting this option prevents having more than one Direct Ship Purchase Receipt/Delivery Ticket saved for a product.
- **Restrict Price By on Received/Invoiced PO Lines** – This option locks down the ability to edit the *Price By* option (*\$/Unit* or *Total \$*) on a Purchase Order once a Purchase Receipt or Purchase Invoice is entered against the Purchase Order.
- **Require GLN on all direct ship POs for electronic vendors** – For vendors set as electronic PO vendors, this option requires a GLN on the *Ship To* tab of the PO to allow the save of the Purchase Order.
- **Use alternate XML PO interface** – When using the B2B program, this allows creating an XML file for the POs being sent electronically to United Suppliers.
- **Use alternate XML PO validations** - This option validates alternate Product IDs and Units of Measure for Purchase Order exports to Aligned Ag.
- **Folder to place XML PO files** – This is enabled when the *Use alternate XML PO interface* option is selected. Specify the location where the XML files are to be created.
- **Folder to Place ASCII PO Exports** – When exporting Purchase Orders to an ASCII file, the export is saved in this specified location.
- **Class of Products that may only be purchased via Direct Shipments** – Select the Product Classification containing the products available for use on a Direct Ship Purchase Order.
- **Forward to Direct Ship Delivery Ticket** – Select *Purchase Order Notes*, *Purchase Order Comments*, or *None* to be included on the Direct Ship Delivery Ticket.
- **PO Pickup/Delivery Locations** – Locations may be entered here with GLN identifiers per location. These locations are available for selection when entering Purchase Orders. The selected location is included when POs are electronically transferred.
- **Display PO Product/Location Warning** – Select this option to notify when a Product on a Purchase Order does not match the global location.
- **Require Date Requested on PO** – Select a Vendor Classification to require Purchase Orders be stopped if they do not have the *Requested Date* populated on the PO. Additionally, Vendors set up as Electronic Vendors will have a label displayed when adding a Purchase Order.

Purchase Receipt

- **Put Location as prefix on PR** – The Location ID is appended as a prefix for the Purchase Receipt number.
- **PR Transfer Out uses Location Information** – With this option selected, when an inventory transfer out is

entered, the location information prints on the Transfer and HazMat documents.

- **Require PO on PR** – With this selected, a Purchase Receipt is not allowed to be saved unless a Purchase Order is referenced.
- **Restrict Edit of P.O. Price at Purchase Receipt** – The estimated cost is prevented from being changed on a Purchase Receipt that was generated from a Purchase Order.
- **Restrict Over Receiving Prepaid PO** – Selecting this disallows more product to be received than is entered on the Purchase Order.
- **Restrict PR returns on PP PO** – With this selected, a Purchase Order number cannot be chosen when entering a return Purchase Receipt.
- **Print EPA # on PR line items** – Items with an EPA number on the product file may optionally have that EPA number printed below the product description on the Purchase Receipt.
- **PO Price Level** – When using the option at the Purchase Receipt to make a Purchase Order, the price level selected defaults into the Purchase Order created.
- **Freight Validation** - Choose from *None*, *Warn*, or *Stop*. Selecting *Warn* displays a message when the calculation of the *Per Unit Freight Amount* does not agree with the amount of freight on the line items of the Purchase Receipt. Selecting *Stop* displays a warning message and disallows saving.

Purchase Receipt

- Put Location as prefix on PR
- PR Transfer Out uses Location Information
- Require PO On PR
- Restrict Edit of P.O. Price at PR
- Restrict Over Receiving on Prepaid PO
- Restrict PR returns on PP PO
- Print EPA # on PR line items

PO Price Level: Average Cost

Freight Validation: None

Options: None, Warn, Stop

Inter-Company Transfer

- **Comp. Cost By** – The cost to use on Purchase Invoices associated with Inter-Company Transfers.
- **Def. Vendor** – This is the default Inter-Company Transfer vendor. It is recommended to have a specific vendor used for all Inter-Company Transfer transactions. This makes the reconciliation of those transactions much easier.
- **Stand-alone Region** – Select a region if the locations are only allowed to transfer products to other locations in the same region.
- **Stand-Alone Vendor** – Select a vendor to be used on Inter-Company Transfers between locations in the stand-alone region.
- **Don't include Add-ons in BT/DT Ship From ICT** - When selected, product add-ons are excluded when a Blend

Ticket or Delivery Ticket creates an Inter-Company Transfer for the selected *Ship From* location.

- **Use Purchase Add-on Charge for Freight** – To have freight per line item on the Purchase Invoice, select an add-on charge to be used when applying freight.
-

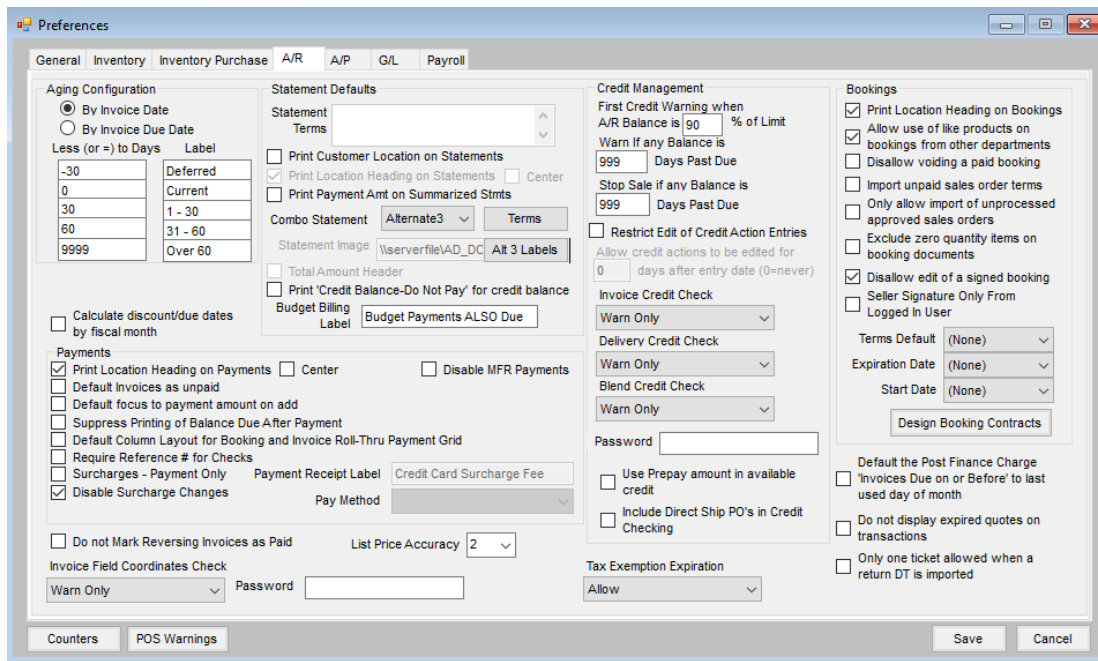

Purchase Invoice

- **Stop PI from over-using PO Prepay** – With this option selected, the Purchase Invoice is not able to overuse Prepay from the referenced Purchase Order.
 - **Choose PO on From Receipt Tab** – When entering Purchase Invoices, a Purchase Order number may be selected on the *From Receipt* tab. By selecting the PO number, the quantity received and invoiced is updated on the Purchase Order.
 - **Read PI From FTP** – When using B2B, selecting this option imports files via FTP for Purchase Invoices.
 - **Enable SSL** – This option is available when *Read PI From FTP* is selected.
 - **Use Passive** – This option is available when *Read PI From FTP* is selected.
 - **Format 2** – This option is available when *Read PI From FTP* is selected.
 - **PI Import Vendor** - For the Omni import, select the vendor to be used.
 - **PI Omni Prod Attributes** - For the Omni import, select the Product Attributes.
-

Style 1 PO Printout Bill To

- **Include Bill To information on Style 1 PO printout** – Select this option to include information entered below (*Name, Email, Address, City, State, Zip*) on the Purchase Order.

A/R

Aging Configuration

- **Aging Configuration** – Select to age *By Invoice Date* or *By Invoice Due Date*, and edit the number of days and the labels. Additionally, the Aging Periods may be customized.

Note: It is recommended to write down or take a screenshot of the current aging configuration before making any changes.

- **Calculate Discount/Due Dates by Fiscal Month** – With this option selected, the discount/due dates for customer Invoices calculate based on fiscal month instead of the calendar month when the Invoice was saved. Payment Terms using the *Months Ahead* option for setting the discount or due date are the only Payment Terms affected by this preference.

Statement Defaults

- **Statement Terms** – The terms message that prints on the statements may be customized by entering the information here.
- **Print Customer Location on Statements** – With this option selected, the Customer's location prints in the upper right portion of the statement document.
- **Print Location Heading on Statements** – With this option selected, the location selected at the time the Statements are generated prints as the primary heading in the upper left portion of the documents. This should only be used if the heading information is not preprinted on custom statement forms.
- **Center** – Used by multi-location companies, this causes the location heading to be centered on the statement form allowing for a preprinted form with the corporate logo in the upper left portion of the Invoice but no

heading. All the locations might use the same statement form with the company logo but have their own heading printed to the right of the standard logo.

- **Print Payment Amt on Summarized Stmt**s – The actual amount tendered displays in addition to the credit applied (which takes discounts into consideration).
 - **Combo Statement** – Choose the format to print for the Combo Statement: *Standard, Alternate1, Alternate2, or Alternate3*.
 - **Statement Image** – Define an image to print in the upper left corner of the *Alternate2* style of the Combo Statement.
 - **Total Amount Header** – Only available with the *Standard* Combo Statement style, this option prints the total amount for the statement which includes the *Budget Billing* amount.
 - **Print 'Credit Balance - Do Not Pay' for credit balance** – This option for the *Standard* Combo Statement works in conjunction with the *Total Amount Header* option above and the *Print Total Balance* preference on the *Combo Statement Report Criteria* screen. When selected, a *Credit Balance - Do Not Pay* notation prints on customer statements that have a credit balance, for the total amount and Total Balance in the statement header, based on the options selected.
 - **Budget Billing Label** – For the Combo Statement, enter the label to describe the *Budget Billing* amount in the statement header. Up to 24 characters may be entered for this label.
-

Credit Management

- **First Credit Warning When A/R Balance is this % of Limit** – If a *Credit Limit* and *Date Opened* are set for any customers at *File / Open / Customer* on the *Credit* tab, then credit warnings start appearing when the sum of the A/R balance and unbilled deliveries reach this percent of the designated limit.
- **Warn if any Balance is ### Days Past Due** – This option allows the number of days an account may be past due without receiving a warning at any point of sale transaction. If a customer has open Invoices with due dates older than the system date and any of those open Invoices have an Invoice date older than the number of days specified, a warning appears when entering transactions for that customer.
- **Stop Sale if any Balance is ### Days Past Due** – This option does not allow a sale if the customer has open Invoices with due dates older than the system date and any of those open Invoices have an Invoice date older than the number of days specified.
- **Restrict Edit of Credit Actions** – This option allows Credit Actions to only be editable for the number of days specified in the *Allow credit actions to be edited for* area.
- **Invoice Credit Check** – When checking customer credit limits, this may be set to *Warn Only, Stop Sale, or Stop with Password* when the Invoice is saved.
- **Delivery Credit Check** – When checking customer credit limits, this may be set to *Warn Only, Stop Sale, or Stop with Password* when the Delivery Ticket is saved.

- **Blend Credit Check** – When checking customer credit limits, this may be set to *Warn Only*, *Stop Sale*, or *Stop with Password* when the Blend Ticket is saved.
 - **Password** – When the *Stop with Password* option is selected for the credit checking options shown above, the password is defined in this area.
 - **Use Prepay Amount in Available Credit** – Selecting this option includes the Customer Prepay in the calculation for available credit.
 - **Include Direct Ship PO's in Credit Checking** – If this option is selected and the Customer has a Direct Ship PO, the amount of that PO is included in the calculation for credit checking purposes.
-

Payments

- **Print Location Headings on Payments** – If printing payment receipts on plain white paper, selecting this prints the location heading on the payment receipt.
- **Center** – If printing the heading on receipts, select this option if the heading should be centered. This is useful for multiple locations that have a customized form with the common logo/name in the upper left and want to personalize with the location name in the center.
- **Default Invoices as Unpaid** – Selecting this option causes the Invoices to default into the grid of the customer *Payment on Account* screen with all Invoices unchecked.
- **Default focus to payment amount on add** – When adding a Payment on Account, this option allows the focus to be in the *Payment Amount* area instead of the *Date*.
- **Suppress Printing of Balance Due After Payment** – In the case where other locations might be affecting customer balances, it may be desirable to suppress the balance after payment.
- **Default Column Layout for Booking and Invoice Roll-Thru Payment Grid** – When selected, the columns on the roll-through *Receive Payment(s) on Account* window are not able to be chosen, resized, or moved. If the *Use UAC* option is selected in the grid, *Pay Amount 1* is zeroed out. If the UAC is not sufficient to cover the Booking or Invoice amount and an additional payment amount is not entered, the payment cannot be saved.
- **Require Reference # for Checks** – If using the *Check Pay Method* on a Payment on Account, this option requires a check number to be entered in the *Ref #* field for any payments not equal to zero.
- **Surcharges - Payment Only** – This gives the ability to set up surcharges for the *Pay Method* selected and does not create an Invoice.
 - **Payment Receipt Label** – The surcharge label can be edited here and will be what displays on the Payment Receipt.
 - **Pay Method** – A *Pay Method* must be selected from the drop-down if the *Surcharges - Payment Only* option is checked.
- **Disable Surcharge Changes** – When enabled, this restricts the ability to change the surcharge amount on all payment forms from what is calculated.

Note: This applies to Payments on Account(s), Bookings, Budget Billing Invoices, and A/R Invoices.

- **Do Not Mark Reversing Invoices as Paid** – When an Invoice is reversed, the original Invoice is left on the Customer account and an exact opposite Invoice is created to reverse the original. If this option is selected, the original Invoice and the reversing Invoice remain on the Customer's account as unpaid Invoices. If this option is not selected, both the original and reversing Invoices are marked as *Paid* when the reversal is saved.
 - **Invoice Field Coordinates Check** – A point of sale warning that can *Warn Only*, *Stop Sale*, or *Stop with Password* if a point of sale transaction is entered without selecting a field and contains a product that is marked as *Needs Field Coordinates* on the *Seed / Lots* tab of the product file.
 - **Password** – If the *Stop with Password* option is selected for the *Invoice Field Coordinates Check*, the password in this area overrides the stop.
 - **List Price Accuracy** – Select the number of decimal places to be used for the selling prices to customers.
 - **Tax Exemption Expiration** – Select *Allow*, *Warn Only*, or *Stop Sale* when a customer's tax exemption certificate is expired. This checking happens when adding an Invoice or a Quick Ticket.
-

Bookings

- **Print Location Heading on Bookings** – With this selected, the location chosen when entering the Booking prints at the top of the document.
- **Allow use of like products on bookings from other departments** – Used by multi-site locations, this option allows one location to Invoice product booked at another location. With this set, the product defaults into the *Invoice* screen marked as *Booked* or *Paid* as if it were booked at the location where the products are invoiced. For this to work, identical Product ID codes in corresponding departments must exist. Those corresponding departments must also be linked with a common *Category* setting.
- **Disallow Voiding a Paid Booking** – If selected, this option forces the void or reverse of the payment for the paid Booking prior to voiding the Booking.
- **Import unpaid sales order terms** – Terms set on the Sales Order may optionally be transferred to the Booking terms when a Sales Order is imported to create a Booking. The *Ship To* address and *Cust PO #* on a Sales Order is imported into a Booking.
- **Only allow import of unprocessed approved sales orders** – When importing Sales Orders from the Planning module, this option only allows unprocessed Approved Sales Orders to be selected.
- **Exclude zero quantity items on booking documents** – With this option selected, any product on the Booking with a zero quantity will not print on the Booking document.
- **Disallow edit of a signed booking** – Select this option to prevent Bookings from being edited after the contract has been signed.
- **Seller Signature Only From Logged In User** – Check this option so the signature of the user logged in will be

added to the contract without the option to select another signature from the list.

- **Terms Default** – Indicate the payment terms to default on the *Booking* screen.
- **Expiration Date** – Choose the expiration date to default to *None*, the *System Date*, *Previous Entry*, or *Terms*.
- **Start Date** – Choose the start date to default to *None*, the *System Date*, or *Previous Entry*.
- **Design Booking Contracts** – If a Booking Contract is to be printed with the Booking, the contract verbiage is defined in this area.

-
- **Default the Post Finance Charge 'Invoices Due on or Before' to last used day of month** – This allows the *Invoices Due on or Before* date at the *Finance Charges* window to default to the last used day of the month when using the **Save Set** functionality. When this option is selected and a **Save Set** is used on the *Finance Charges* window, the *Invoices Due/Dated on or Before* date defaults based on the selected **Save Set**. Agvance uses the system date to determine the month and fills in the day of the month prior to the system date. For example, if a **Save Set** is created with an *Invoices Due/Dated on or Before* date of 09/15/2023, and the system date is 12/01/2023, the *Include in Calculation* date would default as 11/15/2023, which is the 15th of the month previous to December 1st. Similarly, when using that same **Save Set**, if the system date is 11/30/2023, the *Include in Calculation* date would default as 11/15/2023, which is the 15th of the month previous to November 30th.

Setup:

A **Save Set/Load Set** must be used in conjunction with this option and the *Save Set Ranges* for the *Invoices Due on or before* must be *Use Default*. When the **Save Set** is established, the date in the *Include in Calculation* area of the *Finance Charges* window is used to establish the day of the month. The *Invoice Due/Dated on or before* date is established by using the day of the month from the **Save Set**, and then finds the first occurrence of that specified day of the prior to the system date.

- **Do not display expired quotes on transactions** – When selected, only quotes that are not expired as of the date of the transaction are available to be selected.
- **Only one ticket allowed when a return DT is imported** – This option enforces the use of a single return type *Delivery Ticket* on a given Invoice to allow for reporting of these returns. This ensures returns are completely by themselves as a single ticket.

Customizable Contracts

Several areas of the agribusiness industry require custom contracts that are signed when the customer books product. These contracts may be set up and then printed when the customer Booking is printed. They print one contract per product.

How to Set Up Custom Contracts

At *Setup / Preferences*, choose the *A/R* tab. In the *Bookings* area, select **Design Booking Contracts**. Choose **Add** and

complete the *Format Name*, *Heading Section*, *Data Printing Options*, and *Footer Section* with the information required for the specific contract.

Note: Checking the *Seller Signature* and *Buyer Signature* Data Elements will print those signature lines in the footer of the contract.

The screenshot shows a dialog box titled "Edit Booking Contract" with a close button (X) in the top right corner. The "Format Name" field contains the text "Signatures" and has a "Font" button to its right. Below this is a large empty text area labeled "Heading Section" with a "Font" button to its right. The "Data Printing Options" section contains a table with the following data:

	Print	Data Element	Alternative Label
13	<input type="checkbox"/>	Product	
14	<input type="checkbox"/>	Price	
15	<input type="checkbox"/>	Total	
16	<input type="checkbox"/>	SPaid	
17	<input type="checkbox"/>	Amt/Gal Paid	
18	<input checked="" type="checkbox"/>	Seller Signa...	
19	<input checked="" type="checkbox"/>	Buyer Sign...	

Below the table is a large empty text area labeled "Footer Section" with a "Font" button to its right. At the bottom, there is a "NOTE" box with the following text: "NOTE: After designing the contract, it is strongly recommended that you print the test page to the printer that you expect to print these contracts to. Make sure to look over the contract for accuracy and that all of the information printed and all of it fit on the page. If all the info did not print and/or you received an error when trying to print, the header and/or footer information/design needs to be adjusted or changed to accommodate at least one product printing on the page. Please call SSI if any questions." Below the note are four buttons: "Print Test Page" (highlighted), " Print header and footer a single time per contract", "Save", and "Cancel".

How to Print Custom Contracts

Add the customer Booking as described in the previous sections. When the Booking is saved, the *Print Booking Documents* screen appears. If one or more custom contracts have been saved, the *Print Contract* option will be available. Select the printer for the contract and format. Choosing **OK** prints the contract as requested.

A/P

The screenshot shows the 'Preferences' window with the 'A/P' tab selected. The window is divided into several sections:

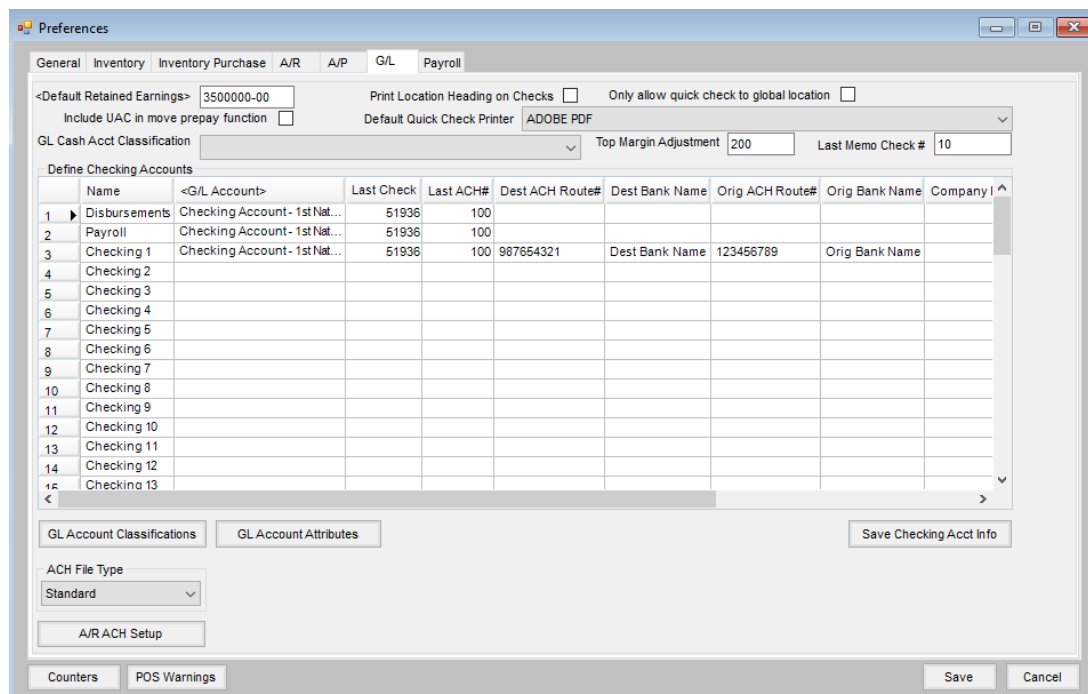

- General Settings:** Includes checkboxes for 'Print Due Date on Batch A/P Checks', 'Print Location Heading on Checks', 'Calculate discount/due dates by fiscal month', 'Transfer Vendor Prepay from PO Amounts', 'Default AP Bills Created from Transfer Vendor Prepay to On Hold Status', and 'Require G/L accounts on AP PO detail lines'.
- A/P Check Stub Style:** A dropdown menu set to 'Inv Description' and a 'Top Margin Adjustment' field set to '400'.
- A/P Check Printer:** A dropdown menu set to 'ADOBE PDF'.
- Vendor ACH File Options:** Includes a 'Path to Create the ACH Files Into' field, an 'Export 7 Records as EDI' checkbox, 'Company Entry Description Override (5 Record)' and 'Immediate Origin Override (1 Record)' fields, and checkboxes for 'Do Not Create Offsetting Record', 'One report per vendor for payment advice', and 'Exclude payment advice preview for vendors set to email'. A 'File Type' dropdown is set to 'Standard'.
- Check File Options:** Includes a checkbox for 'Have Advance Create Text Files Instead of Printing Checks', a 'Path to Create the Text Files Into' field, and a 'File Format' dropdown.
- Vendor Cross References:** A table with 4 rows and 1 column for defining labels.
- Vendor Classifications:** A button to manage classifications.
- Vendor Attributes:** A button to manage attributes.
- Display Message:** A checkbox for 'Use ACH Payment Advice Format 2' and a text area for a custom message: 'The amount of \${CheckAmount} USD has been paid via an electronic payment to your Bank Account # ending with [BankAcctNumber]. Please allow 3 banking business days for the funds to be available in your bank account.' Below this is an 'Email 'From' Address to use when emailing' field.

At the bottom of the window are buttons for 'Counters', 'POS Warnings', 'Save', and 'Cancel'.

- **Print Due Date on Batch A/P Checks** – Selecting this option prints the due date on Accounts Payable checks.
- **Print Location Heading on Checks** – Select this option only if the company name is not preprinted on the check form.
- **Calculate Discount/Due Dates by Fiscal Month** – With this option selected, the discount/due dates for vendor bills calculate based on fiscal month instead of the calendar month when the bill was saved. Payment Terms using the *Months Ahead* option for setting the discount or due date are the only Payment Terms affected by this preference.
- **Transfer Vendor Prepay from PO Amounts** – When vendor Prepay is transferred, this restricts the transfer amount to be the amount on the prepaid Purchase Orders.
- **Default AP Bills Created from Transfer Vendor Prepay to On Hold Status** – Using this option defaults the *On Hold* field on the A/P Bill created by the Transfer Vendor Prepay utility.
- **Require G/L Accounts on A/P PO detail lines** – Selecting this option requires a general ledger account be entered for each line in the *PO Details* grid.
- **Vendor Cross References** – This defines the labels for the cross-reference fields on the vendor *Profile* tab.
- **Vendor Classifications** – Classifications may be defined to help group vendors. An unlimited number of classifications may be established and can be used as a filtering tool in reports or at any *Vendor Selection* screen.
- **Vendor Attributes** – This is a user-defined input. Additionally, Values can be set on the Attributes by selecting **Setup Values**. When setting the Value on an Attribute, it will be required to pick from a specific

Attribute value already in the drop-down.

- **A/P Check Stub Style** – *Summarized* shows one line/Invoice. Using the *Summarized* style, the check stub lists up to 32 bills. The *Inv Description* option prints more Invoice detail and lists up to 16 bills on the check stub. In either case, if the number of bills per check exceeds the maximum, Agvance prompts to insert a white piece of paper into the printer so the additional advice may be printed.
- **A/P Check Printer** – Choose the printer to be used when printing A/P checks.
- **Top Margin Adjustment** – The checks default to a setting of 400. This number may be changed as necessary. To adjust the printing about ¼-inch lower on the form, enter 425 for the *Top Margin Adjustment*.
- **Export 7 Records as EDI** – This exports the list of Invoices as an EDI string.
- **Path to Create the ACH Files Into** – Specify the path where the ACH payment files are created.
- **Company Entry Description Override (5 Record)** – This allows the words *DIRECTDEP* in the ACH file to be user-definable.
- **Immediate Origin Override (1 Record)** – This is used to change the *Orig ACH Route #* that is set up at *Setup / Preferences* on the G/L tab.
- **Do Not Create Offsetting Record** – If the bank does not want the offsetting record to be included in the file, select this option.
- **File Type** – *Standard* is the most common file type which creates a CTX file for the bank. *Simple* was created as a secondary file type for Commerce Bank. *CCD* is another type of standard file for banks requiring a CCD file.
- **One report per vendor for payment advice** – If the ACH payment advice is being emailed directly from Agvance, this option must be selected. If the ACH payment advice is not automatically being emailed, it is optional. When selected, it causes the ACH Payment Advice to be a separate document per vendor instead of one consolidated PDF containing multiple pages for all vendors being paid.
- **Have Agvance Create Text Files Instead of Printing Checks** – Text files may be created instead of printing checks if this option is selected.
Note: Printing checks from text files is not supported within Agvance. Text files are for use by third party printers.
- **Path to Create the Text Files Into** – Set the path where the text file should be saved.
- **File Format** – This defines the type of format used for the *Check File Text* option.
- **Use ACH Payment Advice Format 2** – An alternate format will print on the ACH Payment Advice when this option is selected.
- **Display Message** – Information here can be edited to display the desired text on the ACH Payment Advice printout. Bracketed information must remain in order for this information to print on the document.
- **Email 'From' Address to use when emailing** – If an alternate email address is desired for emailing and for printing on the document, enter the email address here.

- **Default Retained Earnings** – This G/L account must be defined before online balances can be captured. Double-click to choose from the existing list of G/L accounts. If Profit Centers are not used, this will be the account where income and expenses post when ending the fiscal year.
- **Include UAC in Move Prepay Function** – This allows Unapplied Cash to be included when transferring the customer Prepay to a liability account.
- **GL Cash Acct Classification** – If a G/L Account Classification is selected, any account with that specific classification will be available at the *Bank Deposit* screen.
- **Print Location Heading on Checks** – Select this option only if the company name is not preprinted on the check form that is used for Accounts Payable checks and Quick Checks.
- **Default Quick Check Printer** – Select from the list of installed printers where the Quick Checks are to be printed.
- **Top Margin Adjustment** – The checks default to a setting of 400. This number may be changed as necessary. To adjust the printing about ¼-inch lower on the form, enter 425 for the *Top Margin Adjustment*.
- **Last Memo Check #** – This tracks the last memo check number used when paying bills.
- **G/L Account** – Double-click in this column to select the general ledger account for the standard disbursement and payroll checking accounts (they are often the same account but both lines must be filled out with a valid G/L account). Any additional checking accounts should be listed under *Checking 1, Checking 2*, etc.
- **Last Check Used** – This number is maintained by the computer as checks are written throughout the system.
- **Note:** The ACH information should be entered on the first occurrence in the checking accounts grid. It will then be copied to any subsequent lines within the grid.

- **Last ACH#** – This tracks the last ACH number used when paying bills.
- **Dest ACH Route#** – This is destination ACH routing number used in the ACH file.
- **Originator ID** – For the *AFT ACH File Type*, enter the originator ID here.
- **Destination Data Centre** – For the *AFT ACH File Type*, enter destination data centre.
- **Originator Name** – For the *AFT ACH File Type*, enter the originator name.
- **Institutional ID Number for Returns** – For the *AFT ACH File Type*, enter the institutional ID number.
- **Account Number for Returns** – For the *AFT ACH File Type*, enter the account number.
- **Customer Short Name** – For the *AFT ACH File Type*, enter the customer name to be included in the file. This information is also used with *Format 2* for the *A/P Check File Format*.
- **Branch Transit#** – For the *AFT ACH File Type*, enter the 5-digit Branch Transit number for BMO. This information is also used with *Format 2* for the *A/P Check File Format*.
- **Bank Account#** – For the *AFT ACH File Type*, enter the 7-digit bank account number for BMO. This information is also used with *Format 2* for the *A/P Check File Format*.
- **Dest Bank Name** – This is the destination bank name for the ACH file.
- **Orig ACH Route#** – This is the originating ACH Routing number for the ACH file.
- **Orig Bank Name** – Enter the originating bank name for the ACH file.
- **Company ID** – The Company ID, as required by the bank for ACH, is entered here. If using Positive Pay Format 7, and an ACH File Type other than AFT, enter the Customer Short Name.
- **Company ACH Route#** – Enter the Company ACH routing number, as required for the ACH file. If using Positive Pay Format 7, and an ACH File Type other than AFT, enter the 5-digit Branch Transit #.
- **Company Bank Acct#** – Enter the company bank account number for the ACH file. If using Positive Pay Format 7, and an ACH File Type other than AFT, enter the 7-digit Bank Account #.
- **G/L Account Classifications** – Used to group G/L accounts, Classifications may be used to easily filter on some of the G/L reports and at any general ledger Account Selection screen. The number of classifications that may be established is unlimited.
- **G/L Account Attributes** – Attributes may be used to cross reference to other systems. Additionally, Values can be set on the Attributes by selecting **Setup Values**. When setting the Value on an Attribute, it will be required to pick from a specific Attribute value already in the drop-down.
- **Save Checking Account Info** – Selecting this saves the routing numbers and bank information in the grid.
- **ACH File Type** – Select Standard, Royal Bank of Canada, AFT, CIBC (Canadian Imperial Bank of Canada), or BOM/RBC Express (Bank of Montreal & Royal Bank of Canada) for the file type to be created for A/R and A/P ACH payments.
- **A/R ACH Setup** – Banking information to be included in the ACH file must be completed in this area prior to creating an ACH file.
 - **ACH Destination ABA Routing #** – Enter the Federal Reserve Bank’s routing number that the processing bank reports.

- **ACH Destination Name** – Federal Reserve Bank’s name that the processing bank reports is entered here.
- **Originating Bank ABA Routing #** – Enter the routing number of the processing bank.
- **Originating Bank Name** – Enter the name of the bank processing the file.
- **Company ID# (FEIN#)** – Enter the company’s Federal Employer Identification Number (FEIN).
- **Company Bank ABA Routing #** – This is the routing number of the bank where the net wages are withdrawn.
- **Company Bank Acct #** – The bank account number where the net wages are withdrawn is entered here.
- **ODFI ABA Routing #** – Enter the trace number from the bank if it is different from the Originating Bank ABA Routing Number. This should only be used at the processing bank’s request.
- **Pay From Company Savings Account** – This notes on the ACH file that the net wages are withdrawn from a company savings account.
- **Do Not Create Offsetting Record** – Some banks do not want the offsetting record included in the ACH file. This should only be used at the processing bank’s request.

Payroll

The payroll preferences are vital to the successful running of payroll. *Pay* and *Deduction* categories must be defined and can also be cross referenced with corresponding default general ledger posting accounts. When adding new employees, these settings will be the default G/L posting accounts but may be edited on the employee file to individualize the posting.

In addition, *Deduction* categories exempt from any of the standard government taxes must be noted as such.

The screenshot shows the 'Preferences' window with the 'Payroll' tab selected. The window contains several tables and form fields. The 'Pay' table lists pay categories like Salary, Hourly, Overtime, Vacation, Sick, Holiday, and Bonus. The 'Voluntary Deductions' table lists items like Health Ins, Dental, 401(k), Garnishment, Co. Paid Be..., Life Insurance, and 401(k) Co.... The 'Exempt From' table has columns for FICA, Fed, St, Loc, FUTA, and SUTA. Below the tables are sections for 'Employee Classifications', 'Employee Attributes', and 'Print Attendance on Checks'. There are also dropdown menus for 'Payroll Check Printer' and 'ACH Check Printer', and a text field for 'Top Margin Adjustment'.

- Pay** – This will list all the separate Pay Categories to be used. Double-click in the *Default G/L Account* column to set the standard G/L posting accounts. The posting of any Pay Category can be individualized by editing the employee at *File / Open / Employee* on the *Pay* tab. Changing any posting account here after the employees are entered will necessitate editing each affected employee to reset the corresponding posting account. If a Pay Category should be deleted, select the *Delete* option for that line item and choose **Save**. Agvance confirms there has been no activity with that category. If there has been activity in the current data, the delete is not allowed. Only one Pay Category and one Voluntary Deduction may be deleted at a time.
- Voluntary Deductions** – This lists all the deductions except government tax deductions. Any deduction that is exempt from government taxes should have a checkmark in the appropriate column. Double-click in the *Default G/L Acct* field to set the standard G/L posting accounts. The posting of any Deduction Category may be individualized by editing at the Employee's *Deductions* tab. Changing any posting account here after the employees are entered will necessitate editing each affected employee to reset the corresponding posting account. If a Deduction Category should be deleted, select the *Delete* option for that line item and choose **Save**. Agvance confirms there has been no activity on that category. If there has been activity in the current data, the delete is not allowed. Only one Pay Category and one Voluntary Deduction may be deleted at a time.

Important: The tax shelter status should not be changed during the payroll year. If an existing deduction's exempt status changes, add a new deduction with the appropriate exempt status marked, leaving the old deduction "as is." Changing a status mid-payroll year can have serious W-2 consequences.
- Employee Classifications** – Used to group employees, classifications can be set as needed. Examples of

common employee classifications are: *Full Time, Part Time, Eligible for Benefits, 401(k) Participant*, etc. Many payroll reports can be filtered by Employee Classifications.

- **Employee Attributes** – Attributes can be used to cross reference employee files to other systems. Additionally, Values can be set on the Attributes by selecting **Setup Values**. When setting the Value on an Attribute, it will be required to pick from a specific Attribute value already in the drop-down.
- **Print SSN on Checks** – This option allows the last four digits of the employee social security number to be printed on the paycheck stub.
- **Batch Print** – With this option selected, paychecks won't print as they are processed. To batch print after the paychecks are processed, go to *Payroll / Batch Print Checks* to print a range of checks. With this option deselected, each check prints as it is processed.
- **Suppress Printing Rate on Pay Check** – Select to print the pay rate on the paycheck stub.
- **Print Location Heading on Checks** – Check this option only if the company name is not preprinted on the check form.
- **Print Attendance on Checks** – If the Attendance module is used to track available time off, the balances of the various categories may optionally print on the stub of the paycheck. Select the categories to be printed.
- **Payroll Check Printer** – Indicate the printer where payroll checks will print.
- **Top Margin Adjustment** – The checks default to a setting of 400. This number may be changed as necessary. To adjust the printing about ¼-inch lower on the form, enter 425 for the *Top Margin Adjustment*.
- **ACH Check Printer** – Specify the printer where ACH checks will print. This should be a tray that contains white paper.
- **Use Job Activity** – The optional Job Activity function allows the Pay Categories to be further broken down. Often this tracking is instigated from Worker's Compensation reporting when there are several employees whose job tasks span multiple worker's comp categories. *Job Activity* may also be used to disburse wages to multiple general ledger accounts. To add a Job Activity to the grid, select **Add Row**.

	Earning Category	Job Activity	WC Code	<G/L Code>	WC Mult	Payrate	Delete
1	Hourly	Job Activity		1010000-00	0.000000	0.00	<input type="checkbox"/>

- **Earning Category** – Choose from the Pay Categories defined on the *Preferences / Payroll* screen. This is for subtotaling on the check stub and employee reports.

- **Job Activity** – Key in a description of the Job Activity using up to 10 characters. This description displays for time cards and processing hourly pay but does not print on the paycheck stub.
- **WC Code** – The Workers Comp code for each Job Activity task may be entered. This code is user-defined but could be the code supplied by the worker’s comp insurance provider.
- **G/L Code** – General ledger posting is controlled by the account entered here. There is no employee-level override when Job Activity is used.
- **WC Mult** – The worker’s comp multiplier given by the provider may be entered for each activity.
- **Pay Rate** – The pay rate may optionally be entered for this activity. There is no employee-level override for this rate. If no pay rate is entered for the Job Activity, the rate defaults from the employee file for the appropriate Earning Category when payroll is processed .
- **Delete** – To delete a row from the *Job Activity* grid, select this option and choose **Save**. Checking occurs to verify the Job Activity has not been used in the current data. If it has been used, the delete is not allowed.
