

Fill Two Tanks Using Two Meters at One Time

Last Modified on 03/06/2024 11:04 am CST

When making a delivery, two tanks may be filled at one time using separate meters. In Mobile Energy, select **Setup**, and verify the *Use Multiple Meters* option is unchecked.

Agvance Mobile Energy - Demo Mode

The screenshot shows the 'General' tab of the Mobile Energy setup interface. At the top, there are two tabs: 'General' and 'Printer'. Below the tabs, there are several settings:

- Grid/List row height: 35
- Signature Port: 3
- Sync Customer Balances
- Create PDO Map on Sync
- Enter Ending Tank % After Each Fill
- Use Multiple Meters (highlighted with a red box)

On the right side, there is a 'Bill of Lading Notes' section with a text area. At the bottom of the screen, there are three buttons: 'Version Data', 'Save', and 'Cancel'. The 'Save' button is highlighted with a blue box.

1. Start a ticket for one of the tanks (Gas or Diesel), and select the proper meter for the fuel being delivered.
2. Exit the truck, turn both meter knobs to *Run*, pump the fuels into the two tanks, and, when completed, turn both meter knobs to *Stop*.
3. Return to the truck and in Mobile Energy, select **Read Meter**. The system only displays the gallons for the meter selected for this ticket.

4.

Meter 1: 20.20
Meter 2: 0000.00

5. Complete the first ticket, and choose **Save**. Remove the first ticket from the printer, and place the second ticket in the printer.
6. Start a ticket for the second tank being filled. When prompted, select the proper meter for the fuel delivered

to the second tank.

7. Choose **Read Meter**. The system displays only the gallons for the meter selected for this ticket.

8.

Meter 1: 0000.00

Meter 2: 31.90

9. Complete the second ticket. There is now a separate ticket for each tank.
