

Voiding Blend to Stock

Last Modified on 05/26/2026 1:41 pm CDT

When a Blend Ticket has been used to manufacture inventory using the *Blend to Stock* feature, the entry will need to be reversed at *Accounting / Inventory / Manufacture Inventory*. By doing this, quantities of the raw products used and quantities of the manufactured Product produced will revert to what their balances were before the Blend Ticket was used.

Note: The Blend Ticket itself cannot be voided or reversed. A new ticket will need to be created that is identical to the original, or the original blend can be imported again.
