Voiding Blend to Stock

When a Blend Ticket has been used to manufacture inventory using the *Blend to Stock* feature, the entry will need to be reversed in *Accounting / Inventory / Manufacture Inventory*. By doing this, quantities used of the raw products and quantities produced of the manufactured product will revert to what their balances were before the blend ticket was used.

Note: The Blend Ticket itself cannot be voided or reversed. A new ticket will need to be created that is identical to the original, or the original blend can be imported in again.
