## Formulate Liquid Fertilizer Blend Using Gallons of Guaranteed Analysis

Last Modified on 11/04/2025 8:25 am CST

When applying a liquid fertilizer blend at a given gallon per acre, it is possible to formulate the Guaranteed Analysis for that specific amount. At the *Add Blend Ticket* window, enter the Guaranteed Analysis request in the boxes for *N*, *P*, *K*, etc. Then select *Guaranteed Analysis* under the *Formulate By* area. Next, insert the total *Gal of Analysis* desired and select the **Formulate** button.

In this example, the request is for 35 gal/acre of 4-12-0-2s.

After selecting **Formulate**, the program will attempt to fulfill the request using the Products available and parameters selected in the Product Set. Water will be used to reach the desired analysis and Gal/Acre if necessary.
