

# Reconcile Freight and Additional Charges

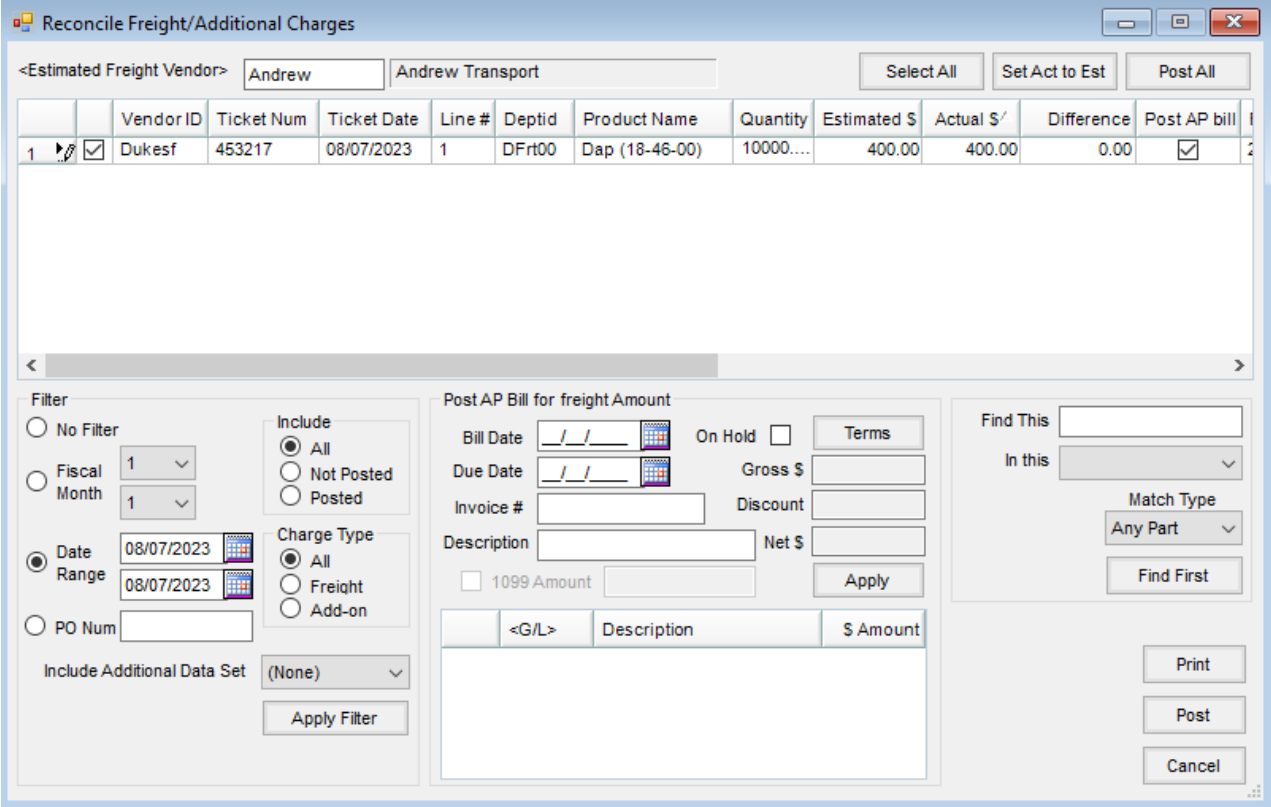

Last Modified on 05/06/2026 10:03 am CDT

Reconcile estimated cost to actual cost for freight and additional charges, optionally creating an A/P Bill.

In SKY Analytics, the [Freight Reconciliation dashboard](#) combines the three different ways to run the [Freight Reconciliation Summary](#) into one dashboard, reducing the amount of time it takes to reconcile freight.

## Reconcile Freight/Additional Charges

If Estimated Charges were entered during the purchasing process, this utility is helpful for reconciling the estimated add-on charges with the actual charges. This can be found by going to *A/P / Reconcile Freight/Additional Charges*.

This utility was designed to reconcile estimated freight and accrued add-on charge amounts entered in the *Inventory* area. Select the checkbox in the first column of line items to be reconciled/edited.

- **Estimated Freight Vendor** – Select the freight or add-on charge vendor to be reconciled. The charges display and may be filtered by selecting one of the filter options and choosing **Apply** found in the *Filter* area.
- **Actual \$** – Enter the actual amount of the bill in the *Actual \$* column.
- **Post AP Bill** – If an A/P Bill is needed, check the *Post AP bill* checkbox which displays the *Post A/P Bill for freight amount* information.

- **Post A/P Bill for freight amount** – Complete the information from the A/P Bill. The *Bill Date*, *Due Date*, and *Invoice #* are required fields. Selecting **Apply** displays the General Ledger Account from the estimation and the dollar amount from the actual amount in the grid. If one or more additional G/L accounts are required for this A/P Bill, double-click on the G/L column heading of the grid for additional lines. The *On Hold* option creates the A/P bill and makes the journal entries but hides the A/P Bill at the *Pay Bills* window. To pay the Bill, open it at *Accounting / A/P / Add/Edit Bills* and uncheck the *On Hold* option. Choose **Post** to post the items to the general ledger and the A/P Bills.

**Note:** Be cautious in changing the GL account number listed in the *Post AP Bill for freight Amount* section.

The number is automatically populated as indicated below:

- If reconciling estimated freight, it populates from the *Estimated Freight* account number at *Accounting / Setup / Locations* on the *G/L Posting* tab.
  - If reconciling add-on charges, it populates from the *G/L Account* number at the *Edit a Purchase Add-on Charge* window at *Accounting / Setup / Inventory / Purchase Add-On Charges*. If no G/L account is indicated, it populates from the same area as estimated freight.
  - Journal Entries for the difference between estimated and actual costs are automatically made to the account listed above and the G/L account listed as the *Freight/Add On #* at *Accounting / Setup / Inventory Departments* on the *G/L Posting* tab.
- **Select All** – This selects all charges showing in the grid. Line items can be selected individually with the checkbox in the first column.
  - **Set Act to Est** – Quickly set the *Actual \$* column to be the same dollar amount as the *Estimated \$* column. After using this, edits can be made to the *Actual \$* amount as necessary.
  - **Filter** – The grid is populated based on the criteria selected in the *Filter* section of the *Reconcile Freight/Additional Charges* window. Select **Apply** after changing the criteria.
  - **Post All** – Choose this to select the *Post A/P Bill* column for all the estimated charges showing in the grid.
  - **Print** – This will print the grid.
  - **Post** – Selecting this will post the Journal Entry for the difference between the estimated and actual amounts for all selected entries and optionally the A/P Bills.

## Posting Notes

If the option to *Post an A/P Bill* was used, the posting of the bill is identical to the posting that occurs when an A/P Bill is manually added.

**Note:** Freight/Additional Charges can be re-reconciled after a Bill has been posted if needed. To do this, select the Vendor and filter for *Posted*. Select the line item in the grid needing re-reconciled. Enter the correct *Actual \$* in the grid, and select **Post**. A Journal Entry will be made for the difference for the Freight/Add-On account from the Inventory Department and the Estimated Freight Account (for the Location) or the accrual account. The original AP Bill can then be voided and a new Bill entered at *A/P / Add/Edit Bills* as a new Bill cannot be posted for the same line on the *Reconcile* window.

- **General Ledger** – A Vendor-Type Journal Entry is made to move the amount from the Estimated General Ledger Account to the Actual account. If there is a difference in the *Actual \$* compared to the *Estimated \$*, the difference is handled with a Journal Entry.

Vendor Journal Entry	Debits	Credits
Amount Due Vendor on AP Bill (if AP Bill is posted)	Estimated Freight (for the Location) or the accrual account	
Amount Due Vendor for AP Bill (if AP Bill is posted)		Accounts Payable (for Vendor Location)
Difference between Estimated Freight and Actual Freight	Freight/Add-On account from Inventory Department	
Difference between Estimated Freight and Actual Freight		Estimated Freight Account (for the Location) or the accrual account

## Troubleshooting

If Estimated Freight was added to a Purchase Receipt/Purchase Invoice but the Actual Freight on the bill is different than what was entered, the Reconcile Freight/Additional Charges utility DOES correct the GL when the Bill is created.

However, the cost of the individual Product will be skewed if there is a large variance. This cost will not be adjusted upon reconciling Freight. To adjust, void the Purchase Receipt and Purchase Invoice (if a PI was added), then re-enter with the correct freight cost.

Once the PR/PI are re-entered, the reconciliation can be completed and the AP Bill posted.
