

# Lot Numbers on Delivery Tickets

Last Modified on 02/16/2024 8:11 am CST

If the person in the office doesn't know what Lot Number the customer should get, set up the unloaded ticket without picking a Lot Number. When the products are scanned in the warehouse, Agvance will attach the Lot Number scanned to the corresponding product on the unloaded ticket that has no Lot Number.

If Lot Number checking preferences at *Accounting / Setup / Inventory Departments / Profile* are set to *Stop Sale* for missing Lot Numbers, change that to *Warn Only* or *No Checking*.

- *Warn Only* will cause Agvance to issue a warning when a Delivery Ticket is saved for a product in that department with no Lot Number selected.
- *No Checking* means the ticket will save without a warning.
