Grower360 Notifications - Agvance SKY Admin

Last Modified on 07/06/2026 2:21 pm CDT

Notifications allow for communication with Grower360 customers through the Grower360 application as well as email.

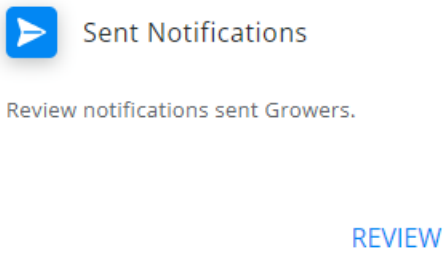

To see a video of Grower360 Tools in Agvance SKY Admin, see **here**.

Send notifications as well as review *Sent Notifications* and/or *Notification Settings* at *Agvance SKY Admin / Grower360 / Notifications*.

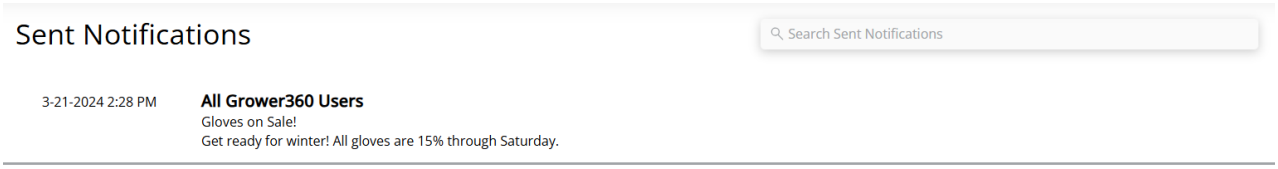

Sent Notifications

To see notifications sent to Growers, choose **Review** on the *Sent Notifications* card.

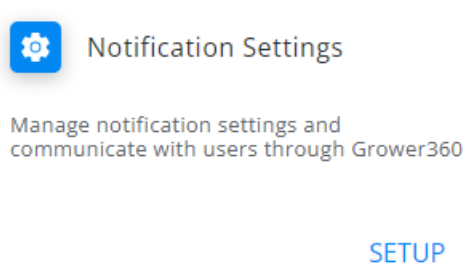

Optionally use the *Search* field to find specific notifications that have been sent.

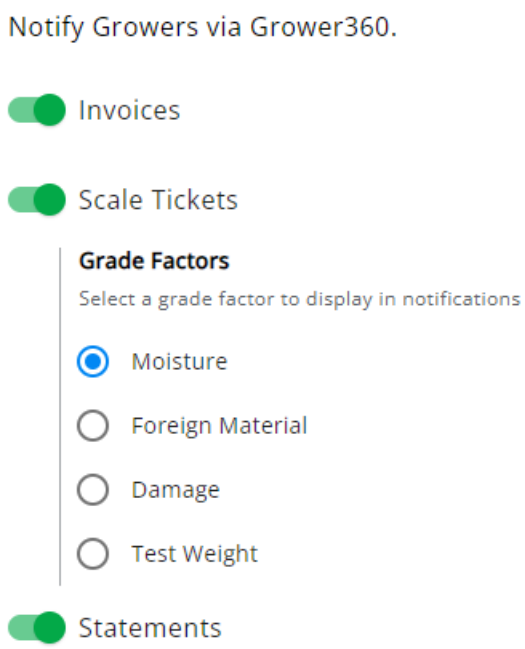

Notification Settings

To manage notification settings and communicate through Grower360, select **Setup** on the *Notification Settings* card.

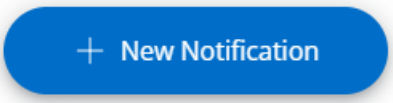

From here, opt to notify Growers via Grower360 by turning on the *Invoices*, *Scale Tickets*, and/or *Statements* options. If Scale Tickets is turned on, indicate the *Grade Factor* to display in notifications.

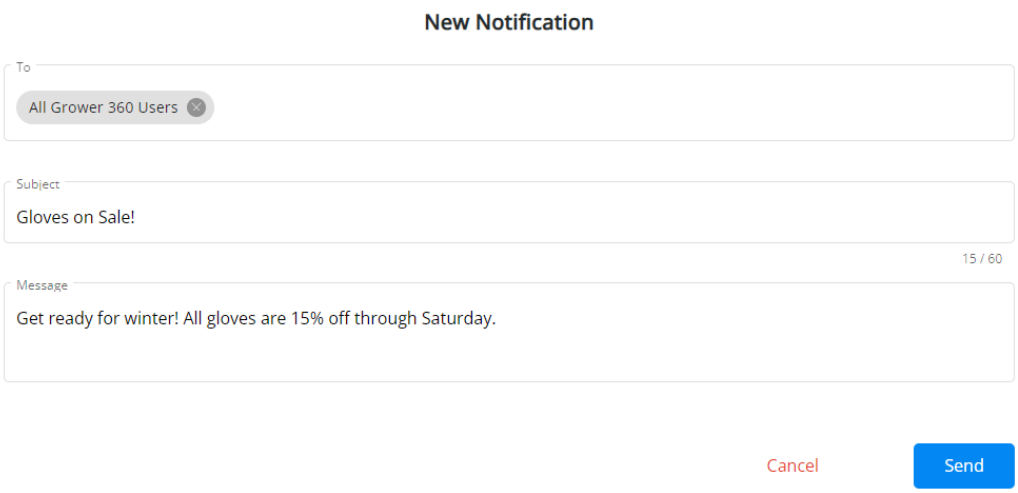

When enabled, notifications will be sent to Growers who have *Email/Text Notifications* set up in Grower360 and will also display as a new item under the **Notifications** icon.

New Notification

To create a new notification, select **+New Notification** at the bottom right of the page.

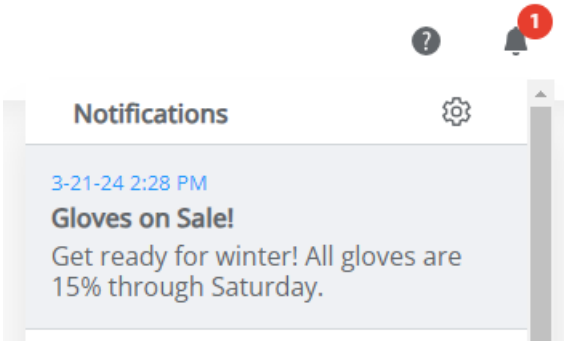

One or more Customer Classifications can be selected from the *To* field on the *New Notification* page. The options in this field are tied directly to the Customer Classifications set in Agvance Windows. Notifications are only sent to Customers in the Classification with a linked Grower360 account. If a Customer is present in more than one selected Customer Classification, that Customer will only receive one notification.

Once the *Subject* and *Message* fields are populated, select **Send** to send the notification to the selected Customers or **Cancel** to discard the notification and return to the *Notifications* page. A confirmation stating *Notification Sent* displays and the message is now listed under *Sent Notifications*.

Customers can view the notification in their email inbox or by selecting the **Notifications** icon from their Grower360 account.

Notifications received through text will contain the *Subject* line and URL link to view the full message in Grower360.
