

# Interpreting Pricing Level Data in Grower Table

Last Modified on 01/20/2022 2:39 pm CST

What does the data under the pricing column in the grower table mean?

- If it is a -1, then the customer has a blank pricing level.
- If it is a 0, then the customer has a pricing level of list price.
- If it is a 1, 2, 3, etc., then it is using the pricing level that is setup in the *Accounting / Setup / Inventory Departments / Price Levels* tab. For example, if it has 1 in the column, then it refers back to what was entered for pricing level 1.
