

Loaded Blend Tickets

Last Modified on 01/25/2022 3:53 pm CST

For companies using the Blending module, this is another option for affecting inventory as product is delivered. Like Delivery Tickets, Blend Tickets have a *Loaded* status that can be set directly on the Blend Ticket or can be set by several *Edit to Actual Weight* functions. Loaded Blend Tickets affect inventory but do no posting to the customer's account or the general ledger. Unprocessed, loaded Blend Tickets are available to be imported easily into the invoicing function, eliminating the need to re-enter the products and their quantities.
