

Regular Booking

Last Modified on 05/03/2024 4:08 pm CDT

- **Splits** – This allows any predefined splits that might have been set at the *Customer Selection* screen or Field file to be viewed. In a split situation, the first Customer (usually the grower) is displayed on the opening screen.
- **Customer ID** – The *Regular* balance, *Prepay* balance, *UAC* balance, and *Credit Limit* displays from the Customer file. To view another Customer in the split, choose **Next** in the lower right portion of the screen. The Customer file can be viewed by selecting the **Question Mark** icon to the right of the *ID*.
- **Field ID** – If booking by Field, the *Field ID* is filled out and Field detail can be accessed by selecting the **Question Mark** icon.
- **Comments** – Type in any comments to be conveyed to the Customer(s). By selecting the chevron at the end of the *Comments* field, saved comments may be selected.
Hint: To add a new comment to the list of saved comments, double-click the *<Comments>* label.
- **Book Date** – This date defaults based on settings at *Setup / Location Preferences (Previous Entry or System date)*. The defaults used at the *Invoicing* screen work here.
- **Start Date** – A date may be entered for availability of this Booking. Bookings with a future start date show but display in red at invoicing as an indicator that the transaction is outside of the *Start/Expiration* date range. Even if the transaction is outside the range, the Booking may still be invoiced. A default of *System Date*, *Previous Entry*, or *None* may be established at *Setup / Preferences* on the *A/R* tab.

- **Expiration Date** – A date may be entered when the Booking expires. Expired Bookings display in red at invoicing as an indicator that the Booking is outside of the *Start/Expiration* date. Even if the transaction is outside the range, it may still be invoiced. A default for setting the *Expiration Date* can be found at *Setup / Preferences* on the *A/R* tab.
- **Price By** – Related only to fertilizer, indicate whether to price (and display) each Product separately or show and price by Analysis on the Booking. The default is set at *Setup / Location Preferences* with options being *Products* (show all the individual items), *Blended Analysis (Lbs/a)*, *Guaranteed Analysis (%)*, or *Elements (N, P, K, S)*.
- **Price Default** – Only applicable in split situations, this setting determines how the editing of prices on one Customer affects the others in the divide. With the *Same* option selected, any editing of *Unit \$* causes all Customers' prices to be changed to the new price. With *Individual* selected, a change to a price affects only that Customer's Booking.
- **Terms** – Discounts are defined in the Hub at *Setup / Payment Terms* where flat rate or graduated discounts that are either based on percentage of dollars or volume may be created. Discounts expire in either a certain number of days (from the *Invoice Date* or by a particular date. Choose from all terms available or *None*. The *Terms* default may be set at *Accounting / Setup / Preferences* on the *A/R* tab.
Note: The **Ellipsis** icon left of the *Terms* displays the discount for the selected Customer in a window so the effect of the Payment Term may be seen before printing the Booking.
- **Generic Prepay** – Select the *Generic Prepay* option to activate the options in this area. Expand the first drop-down menu to choose the appropriate *Generic Prepay Type*. These types are maintained at *Setup / A/R / Generic Prepay Types*.
 - **Price Level** – Select the *Price Level* to be used on the Invoice when Prepay is used. If no Price Level is required, set this option to *None*. Setting the *Price Level* to *None* means no specific price level is required to default into an Invoice. When the generic prepay Booking is used on the Invoice, the pricing defaults from the normal pricing hierarchy with no influence from the generic prepay Booking. Also, setting the *Price Level* to *None* causes the generic prepaid Booking to automatically be used along with unpaid Product-specific Bookings on the same line item at the time of Invoice if no other Booking conflicts exist.
 - **Prepay Amount** – Enter the amount of Prepay received.
- **Business Influence** – If the *Use Business Influence Bookings* location preference is enabled and the Customer has *Influences* set on the Customer file, this selection is available when adding a Booking. When selected, this Booking may be consumed by any Customer selected for that *Business Influence Type* on the Booking Customer's file.
- **Product/Pricing Grid** – If adding a Booking by selecting **Import Plans/Sales Orders**, this grid has the items entered from that previous document.
- **Product Name** – To add Products to the grid, double-click this column heading and select the items at the

Select Products screen.

- **Quantity** – Set quantities at the *Select Products* screen or enter the quantities here. This quantity is always in *Inventory Units* as defined at *File / Open / Product* on the *Profile* tab.
- **Inv Units** – Displayed automatically, these are the *Inventory Units* as defined at *File / Open / Products* on the *Profile* tab.
- **Levl** – This displays automatically based on several variables. Below are the options in the order they default.
 - **Quote** – If booking from a *Field Plan* or *Sales Order* that was set to *Quoted*, then the prices are brought forward and this indicator is set. If importing more than one *Field Plan* or *Sales Order*, any quotes set are nullified.
 - **List** – If the above option does not apply, the *Customer profile* is checked to see if there is a pricing preference (*List* or *Price level*). If that is the case, *Levl* defaults to that *Price Level* or *List Price*. If no preference is set at the *Customer Profile* screen, then *List* is the default.
- **P** – This indicates the *Prepaid* status of this item. Any item with a checkmark in this column is considered prepaid.

Note: If this *Prepay* flag is not set at this screen, the *Prepay* payment may be entered at the *Payment on Accounts* screen to mark the *Booking* as *Paid*.
- **Dwn** – If only a partial amount of the item is being prepaid, mark this column. This should only be used if the remainder of the *Booking* will not be prepaid.
- **Unit \$** – This defaults in the same order and manner as *Levl* explained above. In addition, double-clicking here allows selection from all the *Price Levels* along with the *List* and *Cost* prices for this item or manually entering any pricing.
- **Bill Units** – Automatically displayed, these are the *Billing Units* as defined at *File / Open / Product* on the *Pricing* tab.
- **Total \$** – This is the dollar extension ($(Quantity / Billing Divisor) \times Unit \$$). The *Billing Divisor* is set at *File / Open / Product* on the *Pricing* tab. This extension may be overridden by selecting (or double-clicking) on the existing dollars and keying over it.
- **S#** – This indicates which predefined split option applies to this line item. Predefined splits are set at *Hub / File / Open / Field* on the *Bill Splits* tab. Those settings and any defined at the *Customer Selection* screen that precedes the *Booking* screen may be overridden by changing the percentage in the $\langle \% \rangle$ area.
- **%** – In a split arrangement, this column displays the percentage for this line item that applies to the *Customer* displayed in the upper left portion of the screen. This is 100 if only one *Customer* is on the *Booking*. In a split situation, double-click and modify the split percentages to each *Customer* for this specific line item if necessary.
- **Your Share** – This displays the *Customer's* portion of the line item.
- **Amt Paid** – For use on down-payment *Bookings*, the amount defaults to the full amount of the line item. If the *Customer* is not paying the full amount of the line item, double-click to enter a partial payment amount by

Percent of Total \$, Per Billing Unit, or Dollars.

- **Quant Left** – This displays the quantity left on the Booking that has not yet been invoiced.
- **Dollars Left** – This displays the dollars left on the Booking that has not yet been invoiced.
- **Invoiced Quantity** – The quantity of the line item that has been invoiced is displayed.
- **Print Lineitem** – If *Print Methods* or Rollup Kits are used, this column displays the print order for each line item.
- **Rollup Kit** – If a rollup kit is included in the Booking, select the appropriate rollup kit. The Products from the selected rollup kit are included in the Booking.
- **Low Unit \$** – For unpaid Booking Products with fluctuating prices based on market price, enter the low unit price in this area.
- **High Unit \$** – For unpaid Booking Products with fluctuating prices based on market prices, enter the high unit price in this area.
- **Alt Prod ID** – The *Alternate Product ID* is available at the *Add Booking* window at *A/R / Product Bookings*.
- **Control #** – This is an optional control number to cross reference the Booking with another numbering scheme.
- **Salesperson ID** – If a salesperson is set on the Customer file, the *Salesperson ID* defaults into the Booking. If a salesperson is not set on the Customer file, a *Salesperson ID* may be selected.
- **Additional Comments** – Optional comments may be entered that will print at the bottom of the Booking document.
- **Analysis** – If *Price By* is set to *Analysis* and **Import Field Plans/Sales Order** was selected at the *Select Customer(s) or Field for Booking* screen, this is filled out for any fertilizer Products. This information can be manually entered by having at least one line item checked as *Analysis* and by selecting one of the *Analysis* options for the *Price By* selection on the *Booking* screen, then choosing **Analysis**.

Analysis Info For Booking #1200279

Analysis	N	P	K	S	UD	Ca	Mg	Zn	Fe	Mn	Cu	B
Blended	0	0	0	0	0.00	0	0	0.00	0.00	0.00	0.00	0.00
Analysis	28	0	0	0	0.00	0	0	0.00	0.00	0.00	0.00	0.00

	Customer	Quantity	Inv U	Unit \$	Bill U	Total \$	Split	%	Your Share
1	▶ Barry Anderson	3084.000	Lbs	213.00	Tons	328.45	1	100.0000	328.45

Apply OK Cancel

- When fertilizer is imported from Blending, the analysis will be filled out. *Blended* refers to the actual pounds/acre applied. *Analysis* refers to the guaranteed analysis (% of nutrient in 100 pounds of

Product).

If no tickets are being imported and the analysis is to appear on the Booking, the appropriate numbers may be typed here. In order for the analysis to print on the Invoice, the *Print Analysis on Invoice* option at the *Setup / Location Preferences* screen must be selected.

- **Customer Grid** – This grid displays the quantity breakdown by Customer as it will print on the Booking if the *Price By* preference is set to one of the *Analysis* options (either *\$/acre* or *%* option).
- **Apply Rollups** – For lines with rollup kits selected, this applies the Products from the rollup kit to the Booking.
- **Planned Booking Payment Method** – Select from the drop-down the Booking Payment Method. These must first be set up at *Setup / A/R / Booking Payment Methods*. More information can be found [here](#).
- **Contract Format** – Select the Contract Format from the drop-down. These must first be set up by going to *Setup / Preferences* and selecting **Design Booking Contracts** on the *A/R* tab.
- **Contract Signed** – Select this option to indicate the Customer has signed the contract. A notification is sent to SKY. Additionally, if the *Disallow edit of a signed booking preference* is selected on the *A/R* tab at *Setup / Preferences*, checking this option will prevent any edits to the Booking after saving.
- **Assign Seller Signature** – Check this option to capture the Seller Signature. A window will display to select the appropriate seller. If the *Seller Signature Only From Logged In User* option is selected at *Setup / Preferences* on the *A/R* tab, the signature of the user logged in will be added to the contract without the option to select another signature from the list. For more on setting up signatures, see [here](#).
- **Product Quotes** – Quotes given to the Customer and saved at the *File / Open / Customer* screen by using the **Product Quote** icon may be pulled up at the *Booking* screen and displayed for reference. The Product prices do not default based on these Customer quotes. However, if a quote exists for one of the selected Products on the Booking, the **Product Quote** icon displays red. By selecting the icon, it displays all the promised prices or double-click the *Unit \$* price for the quoted Product. The standard pricing options, as well as quoted prices for this Product, are available to select.

Note: This Quote function should not be confused with quoted prices set in Planning and passed through as default pricing to the Booking.

Quote for AndBa Barry Anderson

Product Name	Quote Price	Quote Date	Quote #
