# Migrate Purchase Contract - Grain

Last Modified on 08/15/2024 9:53 am CDT

When migrating Purchase Contracts with amendments, any amendments with a deduction are added to the new Priced Contract.

- **Contract Units to Migrate** – These are the units to migrate to the new priced Purchase Contract. This value cannot exceed the *Non Delivered units + Available units* that can be checked to migrate.

  Note: Do NOT include the *Units to Settle* not checked to *Migrate*.

- **Cash Price to Migrate** – This is the cash price for the new priced Purchase Contract.

- **Contract Units Available to Migrate** – This is the number of units that can be put to the new priced Purchase Contract.

- **Available Units** – These are open units on the Scale Ticket split line.

- **Migrate Checkbox** – Any Scale Ticket split line with settled units CANNOT be checked to *Migrate*. If the Scale Ticket split line's contract was overfilled to another split line containing settled units, then it CANNOT be checked to *Migrate*.

- **Units to Settle** – This cannot exceed the *Available Units* on the split line. These units will be settled off to a Priced-Not-Paid settlement. This column can be filled out on any line with *Available Units*, even those with settled units. If *Migrate* is checked and the *Units to Settle* is filled out, the program will first migrate those units to the new Priced Contract, then it will settle those units to Priced-Not-Paid.

- **Total Units Selected** – This is a total of the *Available Units* in the grid that are checked to *Migrate*.

- **Total Units that will be Migrated** – This is the *Contract Units to Migrate + Units to Settle* in the grid not checked

to *Migrate.*
