Overview - Agvance SKY Mapping

Last Modified on 07/08/2026 1:13 pm CDT

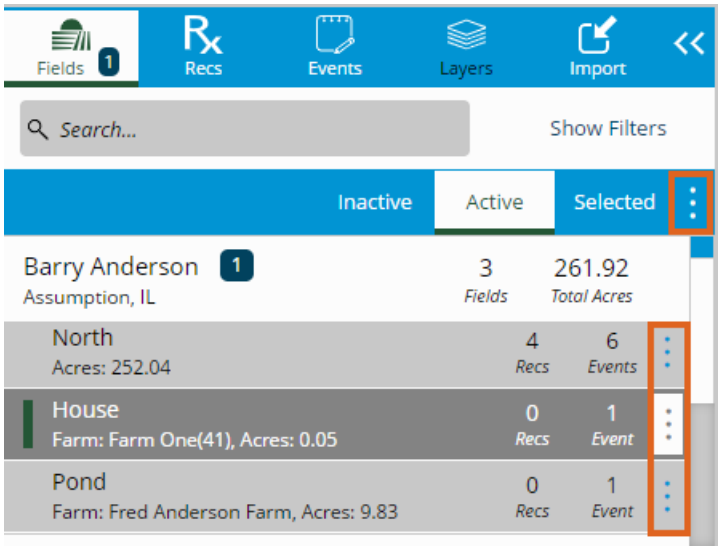

Under the *User* drop-down, the **Mapping Feedback** link as well as a link to Agvance SKY Mapping resources on the Help Center (**Mapping Help Site**) are available.

- **Fields** – This provides access to the Customer list which contains all Fields available to view. Selecting the **Customer Name** expands the list of Fields for that Customer. Choosing a Field Name selects the Field, indicated by a darker gray color and a green bar to the left of the name. Select either a single Field or multiple Fields at a time. The Customer Name shows an incremental number next to it indicating the number of Fields currently selected.

- **Action** – Each level in the Customer/Fields list has a **Vertical Ellipsis** button. This opens the *View* and *Edit* menu options available for the selected level.

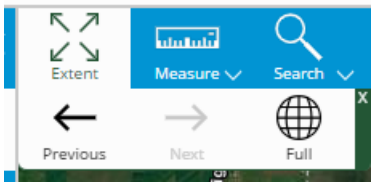

Note: Some of the action icons are only visible if they are hovered over with the cursor.

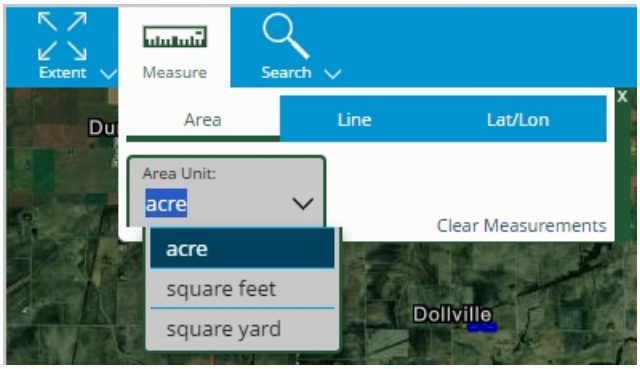

- **Hide/Show** – Select this to hide the menu on the left side of the screen. The *Mapping* window can then be viewed in an extended view.

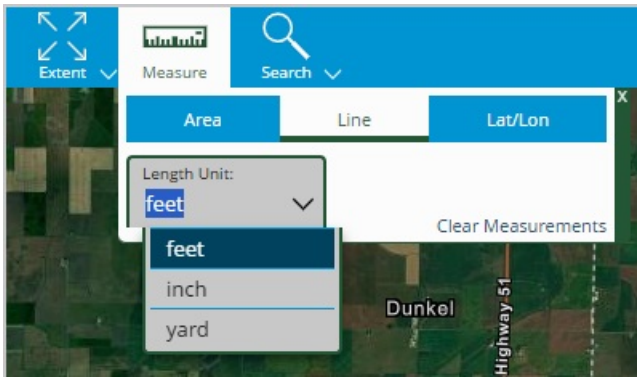

- **Mapping Menu** – Navigate, search, and take measurements within the *Mapping* area.
  - **Map Extent** – Navigate the *Mapping* window easily by selecting **Previous** or **Next** to navigate back and forward through past views and **Full** to zoom out to view an area encompassing all available Fields.

  - **Measure Tool** – The *Measure* tool can be used to measure any distance in the *Mapping* area. Distances can be measured using three different methods:
    - **Area** – Measure by *acre*, *square feet*, or *square yard*.

    - **Line** – Measure by *feet*, *inches*, or *yards*.

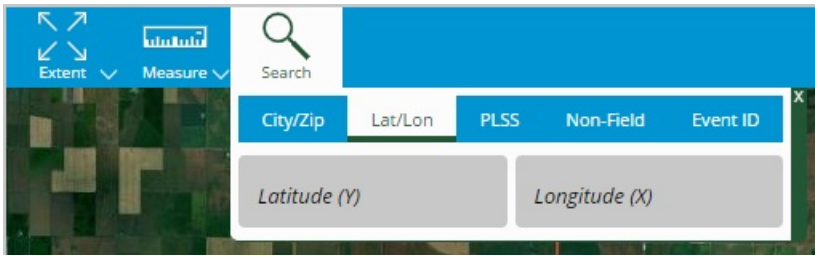

- **Lat/Lon** – The *Coordinate Format* can be changed to *DD* or *DMS*.

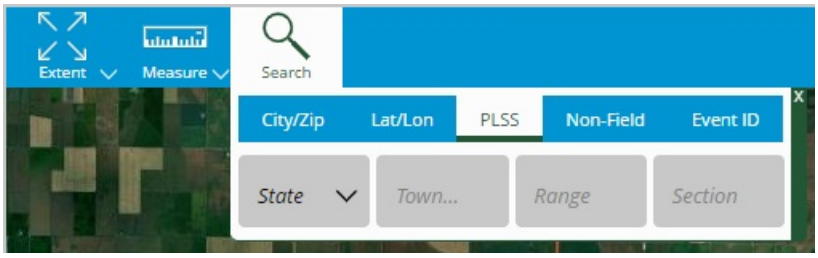

- **Search** – The *Search* tool can be used to zoom to any location on the map. Locations can be searched using five different methods:
  - **City/Zip Code** – Enter any city or zip code and select the **Search** icon.

  - **Latitude/Longitude** – Enter a specific latitude and longitude.

  - **PLSS** – Public Land Survey System zooms to the appropriate location on the map when *State*, *Township*, *Range*, and *Section* are entered.

- **Non-Field** – Use the drop-down or begin typing to find a Non-Field Feature. Selecting an option here zooms to the appropriate location on the map.

- **Event ID** – Use the drop-down or begin typing to find an Event ID. Selecting an option here zooms to the appropriate location on the map.

- **Imagery Options** – Selecting the **Image** icon in the lower right corner of the screen expands the *Imagery Options* menu.

Note: Each of these thumbnails changes the type of imagery visible in the *Mapping* pane.
