Add a New Field - Agvance SKY Mapping

Last Modified on 07/08/2026 1:23 pm CDT

When adding a new Field to Agvance SKY Mapping, the Field and Farm may be added in the Hub first and selected from a populated drop-down list or added from Agvance SKY Mapping as the Field is being drawn.

1. Navigate to the desired Customer and select the **Vertical Ellipsis** to the right of the Customer Name.
2. Select *Add New Field*.

   - If the Field/Farm names have been previously set up in the Hub:
     - On the *General Information* tab, choose *Farm Name* from the drop-down.
     - The *Field Name* drop-down populates, allowing the Field to be chosen from the list.
   - If the Field/Farm names have not been previously set up in the Hub:
     - Create a new Field in Agvance SKY by manually entering the Field/Farm name. A new Field will automatically be created and will also display in the Hub.
     - Fill in any additional information to be stored for the new Field. The information entered here is for reference only.
3. Select **Import** to import a shapefile of the boundary or choose the**Draw** icon to view available drawing tools and to create a Field boundary.
   - Select either the *Polygon* or *Circle* tool to draw a Field boundary.
   - The Field displays the total number of acres within the new boundary.
4. Choose **Save**. An error message displays if required fields are not completed.
