

Importing SKY Mapping Recommendations

Last Modified on 03/21/2022 4:16 pm CDT

Recommendations made in SKY Mapping can be imported into a Blend Ticket in the Agvance program. Importing recommendations from SKY Mapping into Blends or Plans automatically links products the same way as when exporting to SKY Mapping. If no products are selected, a warning will display indicating it is not possible to import to the POS. There is now an option to view the summarized information combining like products before importing to the POS.

1. In Agvance, go to *Blending / File / Open / Blend Ticket*. Select the appropriate Field and choose **Add**.
Note: The Customer and Field must be in SKY Mapping in order to import SKY Mapping Recommendations.
2. On the *Add Blend Ticket* window, select **Import Mapping Recs**.
3. Use the *Location Filter* drop-down to select the Location from which the products will default on the recommendation.
4. Select the desired recommendation from the grid at the top of the window. Lines displaying in blue indicate the recommendation has already been imported into a Blend Ticket. However, recommendations can be imported into a Blend Ticket more than once.
 - Multiple recommendation lines can be selected to be imported into the Blend Ticket.
 - Recommendation boundaries can be viewed by right-clicking on the recommendation in the grid at the top of the window.
5. Once the recommendations have been selected, choose **Add to Detail Grid**.
6. In the *Detail* grid at the bottom of the window, review the selected recommendation information.
 - Products to be imported display in the column. Products default based on the Location selected from the *Location Filter* at the top of the window. If the product needs changed or no product is populated, double-click in the column for that line and choose the appropriate product from the desired location.
7. Select **Import Products to POS**.
8. The *Import SKY Mapping Recommendation* window closes and the recommendations are imported into the *Add Blend Ticket* window.
9. The Blend Ticket can be edited as needed and saved.
