

Blend to Stock from Automated Blender File

Last Modified on 02/21/2022 11:25 am CST

Blend a product for inventory instead of immediate use by a customer.

1. Create an unloaded Blend Ticket to use for mixing material.
2. Navigate to *Blending / Edit / Blend to Stock / From Automated Blender File*. Highlight the Automated Blender File Ticket to import and select **OK**.
3. On the *Read Automated File for Blend To Stock* window, verify the displayed values. The *Done* weights can be edited at this window. Select **OK**.
4. On the *Capture Blend To Stock Amount* window, double-click in the *Product* column to select an existing product. Select **New Product** to add a new product, enter the information, and select **Save**.
5. After the product is selected, enter the *Quantity* of the final product produced. Choose **Save**.
6. A message indicates the Manufactured Inventory was successfully created and a reference number is provided. Choose **OK**.

Note: There are several uses for this functionality such as bulk liquid fertilizer, bagged feed, bagged fertilizer, etc.
