

Inbound Grain with Average Grade Factor Results Dashboard

Last Modified on 04/29/2026 7:24 am CDT

This dashboard honors user restrictions based on login Location.

Purpose

This dashboard displays how much grain comes into each facility and what the weighted average important Grade Factors are when looked at both as Gross Units and Net Units over a certain date range.

Details

Filter by *Beginning Date*, *Ending Date*, *Commodity ID Name*, *Customer*, and *Assembly*.

If the *Grade Factor* column displays *All*, then there are different Grade Factor names across the Scale Tickets returned based on the filters selected. This may cause values in the results area for that column to be inaccurate.
