Grower360 Energy

Last Modified on 08/20/2026 12:36 pm CDT

Energy Tanks and tickets associated with those tanks can be viewed from the *Energy* menu option in Grower360. This option only displays for Growers set up in the Agvance Energy module.

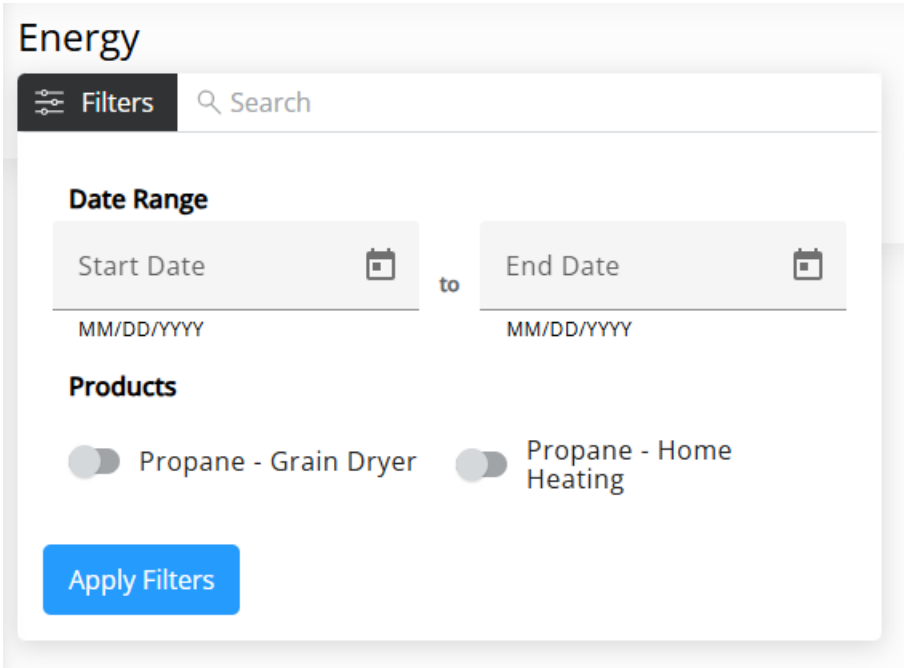

A listing of active Energy Tanks displays the Tank name or serial number, *Last Del Product*, *Tank Size*, *Last Fill Amt*, *Last Fill* date, *Tank %*, and *As of* date for the *Tank %* reading. The *Tank %* is the percent at the time of the last delivery.

Note: If Tank Monitor Readings are being recorded within Agvance, those values will display in the *Tank %* area.

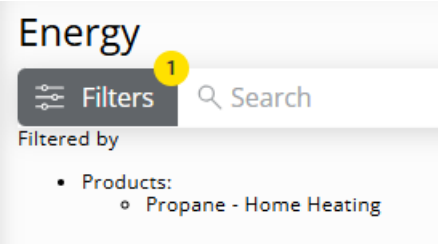

Note: It is important the Energy Tank names in Agvance are set in a way that is fitting for the Customer to view. Best practice is to name these Tanks in a way that makes sense to the Customer as well as staff.

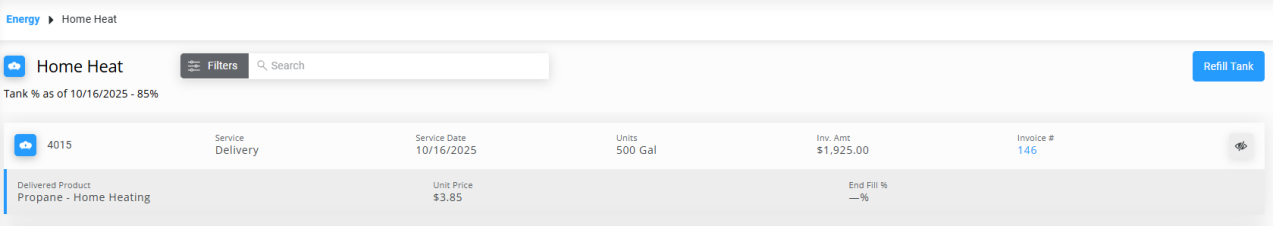

Tanks can be filtered by selecting **Filters** to the left of the *Search* field. Selecting **Filters** displays options to filter tanks by *Date Range* (which is the *Last Fill* date) or *Products*. Tanks can also be searched by the Tank name or *Product*.

The filters selected display below the **Filters** button.

To view Energy tickets associated with a Tank, select the Tank from the list. Each Energy ticket associated with that Tank displays, including the *Service* type, *Service Date*, *Units*, *Inv. Amt*, and *Invoice #*. Select the **Expand** icon to view the *Delivered Product*, *Unit Price*, and *End Fill %*.

The *Tank % as of mm/dd/yyyy* displays at the top of the page and is the percent at the time of the date indicated. These tickets can also be filtered by choosing **Filters** and selecting a *Start* and *End Date.* Additionally, tickets can be searched by the associated Energy ticket # or the *Invoice #*.

Navigate back to the Energy Tank listing by selecting *Energy* from the breadcrumbs at the top of the page.
