Replicate Field Plans

Replicate an existing Field Plan to multiple Fields, allowing acres and prices to be edited.

1. Navigate to *Planning / Utilities / Replicate A Field Plan*.

2. On the *Select a Plan for Replication* window, choose the *Customer*, *Field*, and *Plan* to replicate. Choose **Select**.

3. On the *Replicate Plan* window, choose the Customer and double-click each Field for which the Plan will be replicated. The selected Fields populate the grid at the bottom of the window.
   Note: Select all Fields at one time by choosing **All fields for this Grower**.

4. The *Grower* and *Field* columns default from the Field selected. The Plan letter defaults to the next available Plan for each Field.

5. Select any of the *Import Quote* options to quote each new Plan or leave them as *Not Quoted*.
   Note: The *Import Quote* column defaults to *From Source* if the original source Plan was quoted. The quoted price follows through to the new Plans. The *Import Quote* column defaults to *Not Quoted* if the original source Plan was not quoted. The price is based on the Pricing Level entered on the customer's *Profile* tab.

6. Select the *Print Planning Documents* option if the Plans do not require changes and are ready to be printed.

7. Choose **Save** to replicate the Field Plan to the selected Fields.
   Note: The *Crop*, *Placement*, *Product Set*, *Mini Bulk* and *Custom Applied* options, *Analysis, Application Comments, Blend Comments, Target Pests, Batch Breakdown* options, *Capacity*, and *# of batches* are brought into the new Plans. The *Additional Information* does not carry through to the new Plans.
