

# Agrian Recommendations - Products Not Populating Automatically

Last Modified on 12/27/2022 4:54 pm CST

**Q. When importing recs into Agvance from Agrian, why do the products in the *Agvance Products* column not populate automatically?**

**A.**

1. The product may not be linked with the Agrian link ID number in the *AgrianProdID* attribute.
2. There could be multiple products with the same Agrian link ID number. Only one can be chosen.
3. When filing a recommendation in Agrian, the green Agrian approved product should be chosen rather than a red unapproved product from the EPA list. Agrian provides these red products in case there is an old label that allows for different use than the current label, if they don't have a product indexed, etc.
