

# Scale Ticket Level Management - Assemblies

Last Modified on 04/21/2023 2:14 pm CDT

## Adding an Assembly

To add an Assembly Sheet in the Grain module, select the **Add an Assembly** shortcut icon.

When adding an Assembly, the information on the Assembly is the defaulting information on the Scale Ticket or Scale Ticket split.

The screenshot shows the 'Add an Assembly' window with the following fields and sections:

- General** tab selected.
- Assembly #**: 45
- Location**: 01IND
- <Commodity>**: Corn
- Date Established**: 09/30/2020
- Gross Units**: [Empty]
- Dockage/Shrink**: [Empty]
- Net Units**: [Empty]
- Default Price**: [Empty]
- Percent Dock/Shrink**: [Empty]
- Unavailable**: [Empty]
- Calculate Averages**: [Button]
- Assign Grade Factor Result**: [Button]
- Crop Season**: [Dropdown]
- <Farm ID>**: [Empty]
- <Field ID>**: [Empty]
- Lot Number**: [Empty]
- Freight Charges**: [Button]
- Customer Information Defaults** table:

	<Cust ID>	Name	Split %	<Contract>	Disposition	Condo YN	Freight %
1	237018	Abby Laken	100.0000		Priced Later	<input type="checkbox"/>	

The following information is required for defaulting purposes:

- **Assembly #** – if *Auto-number* is not turned on in *Grain / Setup / Document Counters*
- **Location**
- **Commodity**
- **Customer Information Defaults** (Customer ID, Split %, Disposition, Contract if applicable)

If the customer splits are selected first, the first customer in the list will be the default Grower when selecting a Farm or Field.

The following information is optional for defaulting purposes:

- Farm ID
- Field ID
- Lot Number
- Freight %
- Condo YN
- Shrink, Dock & Premium Discount tables (when selected, these tables override the master tables)

**Note:** If using *Auto Transfer* in a Scale Interface, an Assembly can be added with the defaulting information from the Scale Ticket.

## Editing an Assembly

To edit an Assembly in the Grain module, go to *Operations / Assembly Sheets*. Edit an Assembly to change the default

information. Updated defaults apply to new Scale Tickets after the edit, allowing a grower to keep all Scale Tickets on one Assembly but having different Split arrangements.

Edit Assembly (45)

GeneralShrink, Dock & Premium DiscountUsage

Assembly #45Gross UnitsPercent Dock/ShrinkUnavailableCrop Season<Farm ID><Field ID>Lot Number

Location01INDDockage/ShrinkNet UnitsCalculate AveragesAssign Grade Factor Result

Date Established09/30/2020Default PriceFreight Charges

Customer Information Defaults

	<Cust ID>	Name	Split %	<Contract>	Disposition	Condo YN	Freight %
1	237018	Abby Laken	100.0000		Priced Later		

**Example:** If an Assembly has a *DPR* of *Open Storage* and is edited to *Priced*, any new Scale Tickets applied to the Assembly would have a *DPR* of *Priced*. Any tickets previously added would not be updated and would remain with a *DPR* of *Open Storage*.

## Shrink, Dock & Premium Discount

The *Shrink, Dock & Premium Discount* tab can be used to default tables selected here rather than using the setup defaults.

## Usage

Once an Assembly is saved, the *Usage* tab is available. The *Usage* tab summarizes Scale Tickets based on the combination of each *Customer*, *Disposition*, *Contract*, *Charge Schedule*, *Shrink Schedule*, *Dock Schedule*, *Drying Schedule*, and *Condo*.

## Comments

Once an Assembly is saved, the *Comments* tab is available.

General	Shrink, Dock & Premium Discount	Usage	Comments	Scale Interface Non-Contract DPR Override
---------	---------------------------------	-------	----------	---

<Comment>

Add Comment
 Accept
 Delete

Comment Date	Comment

1. In the <Comments> field, type any comments or double-click to select a *Saved Comment*.
2. Once any comments have been entered, select **Add Comment** then **Yes** to save.
3. Choose **Delete** to remove comments from the bottom grid.
4. To change the comment, type the new comment in the <Comment> field and choose **Accept**. This will replace the original comment with the new.

## Scale Interface Non-Contract DPR Override

Set the Non-Contract DPR to be used when getting a contract overfill.

**Note:** Assembly overrides are checked first, then customer, and finally the company global setting.
