

Scale Ticket Level Management - Reshrink Utility

Last Modified on 02/25/2022 3:24 pm CST

Overview

In Grain, there are two modes of operation: The Standard mode where Scale Tickets are directly associated to the Assembly, and Scale Ticket Level Management where Scale Tickets have an independent relationship to the Assembly. Setup for these two modes is inherently different and therefore they are not interchangeable within Grain.

The information listed in this document is specific to the Scale Ticket Level Management mode of operation.

A common elevator practice is to allow customers a set number of days to decide to store or sell grain. If leaving the grain in storage, it is often reshunk to a lower moisture and additional drying charges are assessed. The *Reshrink Utility* is used to manage the updates of the Shrink and Drying schedules on Open Storage split lines for the commodities/locations.

Setup

Go to *Agvance Grain / Utilities / Reshrink Utility*.

1. In the *Include Scale Tickets* area, enter a *Start Date* and *End Date*.
2. Reshrink Utility updates non-reversed, non-direct shipped, grain posted tickets *On or Before* the selected date and aged by the *Number of Days* entered (grace days given for the grower to decide). The Scale Tickets considered for reshink must also be dated within the *Start Date* and *End Date* range.
3. After designating the *Number of Days*, the *On or Before* date, the *Start Date* and *End Date* range in the *Include Scale Tickets* section, the settings may be saved by selecting **Save Set** with the relevant date values.
4. Choose **Setup** to edit the commodity to be reshunk and set the shrink and drying tables for the reshink process. These tables can be applied to all locations by checking the **Copy Shrink To All Locations** and **Copy Drying to All Locations** features.

Select a Commodity

ID	Name	UOM	Lbs/Unit
CORN	Corn	BU	56
OATS	Oats	Bu	32

Edit

Commodity Location Reshrink Schedules

Commodity

CORN

Location

zlnvMa

Select the schedule to use for this commodity / location as the schedule to assign in the Reshrink utility by the DPR category.

	DPR Category	<Shrink Schedule>	Copy Shrink To All Locations	<Drying Schedule>	Copy Drying To All Locations
1	Open Storage	Store	<input checked="" type="checkbox"/>	Store	<input checked="" type="checkbox"/>

5. Executing the utility once by selecting **Reshrink** will complete the setup and save the settings.

When a ticket with a *Reshrunk* line is edited, the schedules do not automatically update when the Disposition is changed on a split line. When changing the schedule on a split, tables may be changed manually or by editing with the Mass Edit Utilities.

To signify that a Scale Ticket has been reshunk, the label *Shrink Units* in the lower left will change to blue as seen below.
