Managing Item Units in form-U-net

Q. On the *Formulation* page, a chemical needs specified as Qts/ac, however, it needs to print in Gallons on the Mix Sheet. How should this be setup?

A. The units displayed on the *Formulation* window are the *Request Units* setup on the *Items Information / Edit / General* tab. The *Mixing Units* preference is also on this tab.

By default, Material Groups are set to *Mix in Mixing Units* on the *General* tab of the *Material Groups / Edit Selected Material Group / My Group Settings* window. This means the *Mixing Units* display for the items on the Mixing Sheet.

If the *Mix in Mixing Units* option is unchecked, the *Request Units* will be used for the items on the Mixing Sheet.
