

form-U-net Mixing Sheet Won't Preview Normally

Last Modified on 01/27/2025 9:31 am CST

Q. When attempting to print a form-U-net Mixing Sheet, a save window opens instead of automatically previewing the report. How is the Mixing Sheet previewed?

A. The form-U-net program automatically saves up to 101 Mixing Sheets in the *Downloads* folder on the system when previewed using Google Chrome.

After the *MixSheet (100).pdf* file has been saved to the *Downloads* folder, the next Mixing Sheet preview attempt will ask to save the file, instead of automatically saving.

□

If the **Save** button is selected without renaming the file, the existing file with that name will be overwritten. After the file is saved, the Mix Sheet will open as a PDF file to preview.

If the copies are no longer needed, they can be deleted from the *Download* folder. If copies are deleted, form-U-net will again automatically save the Mix Sheets until the 101 limit is reached.
