

Murray Remote Blender Type Option

Last Modified on 06/25/2024 3:47 pm CDT

This option includes a *To Remote* and a *From Remote* destination folder selection field on the *Blender Interface/Print Preference* tab of the *Edit A Product Blend Set* window.

The *To Remote* folder holds the release numbers yet to be processed, and the *From Remote* folder holds the completed blender files. The status of existing files can be viewed by editing the Blend Ticket and selecting the *Automated Blender* tab. This tab is displayed on the *Blend Ticket* window when the Murray Remote Product Set is used for the blend.

The extension of the file name will come from the Murray Remote's Product Set Shipped from Location Code on the *Edit a Product Blend Set* window. For example, if the Blend Ticket number is 461 and the Shipped from Location Code is 01, the filename in the *To Remote* specified folder will be 46101.01 (if there was just a single batch). If there

are two batches, as in the example above, the files are 46101.01 and 46102.01.

The *Shipped from Location Code* must be a number from 00 - 99. An *Expiration Date* is required on the Product Set that will prevent this Blend Ticket from being used if the date has passed.

If the *Edit / Import Automated Blender Files* option is used when capturing the blend done quantities, only those tickets with all of their batches completed will display.

Importing completed jobs from Murray when all batches for the job were not needed

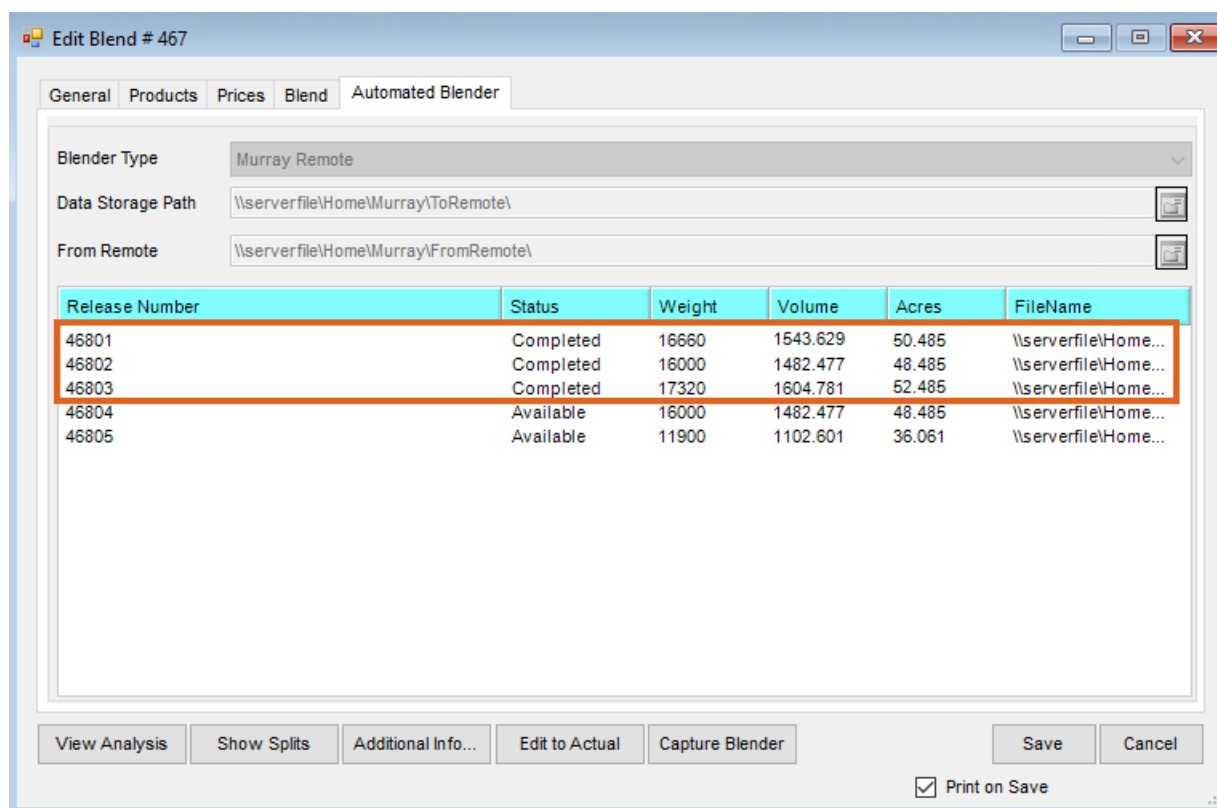

To cancel the remaining batches for a blend job and import only what has been completed, edit the entire ticket and select **Capture Blender**.

In this example, Blend Ticket 467 was created with five batches for the Murray Remote as shown below:

Only three of the five batches were needed. The Customer decided that no other loads will be picked up for this Blend Ticket; therefore, it is complete.

When editing the Blend Ticket, the *Automated Blender* tab displays the completed Release Numbers for the Blend Ticket.

Note that release number 46801 was completed with an additional two acres and ticket 46803 with four additional acres with total weights relative to those acreages. This makes the total weight of the completed tickets $16,660 + 16,000 + 17,320 = 49,980$

Select **Capture Blender**. A warning appears stating not all the tickets are completed. The job is complete so choose **Yes** to continue.

In the *Edit to Blender Records* window, the *Acres* in the upper left corner were adjusted to the completed acres, but the *Liquid Spraying Product* still shows the original acres. Verify the service acres/fee items (other than Acres such as Lbs) are correct. The service/fee items will appear in red in the *Done* column. The individual Product weights have been updated to the actual completed weights from Murray in the *Done* column:

$$49,980 = 8719.172 + 22708.963 + 12280.33 + 2819.03 + 1009.477 + 2443.028$$

The *Archive* checkbox, if selected, creates an *Archive* folder in the specified *From Remote* folder and moves the completed batch files to that *Archive* folder. The batch file extensions remain unchanged at 46801.01, 46802.01, and 46803.01 from the example of completed batch files. Any unused batch files for a completed Blend Ticket in the *To Remote* folder are deleted.
