

# Crop Zones and DriftWatch on Custom Application Sheets

Last Modified on 12/21/2022 1:35 pm CST

**Q. As a Blending user who also subscribes to the DriftWatch service, I need the crop zone colors as well as the DriftWatch data to print on the same Custom Application sheets. How can I accomplish this task?**

A. When printing the Custom Application document, the maps available for printing on Blend Tickets were enhanced to allow the color of the Crop Zone to remain solid when DriftWatch Overlay is included. If DriftWatch is not selected and a layer is chosen on the Crop Zone, the color will be white with the Crop Zone boundary highlighted.
