

# GHS Compliance for Blend Tickets

Last Modified on 12/28/2022 4:15 pm CST

**Q. As a company using Agvance for fertilizer blending, I need to be GHS compliant so I don't get penalized by the DOT, OSHA, EPA, etc.**

A. When printing a Blend Ticket, if there are any *GHS Required* products on the ticket, a *Print GHS* form displays along with the SDS printout. When printing a new Blend Ticket, this form loads the GHS template for the ticket's location defined on the *Blending / Setup / Location Preferences / GHS SDS Template*. The GHS text may be edited in the form and is saved when printed. On a reprint of a Blend Ticket, the form loads the text previously saved for the ticket.
