

Dicamba Federal Regulations - Recording Clean Out

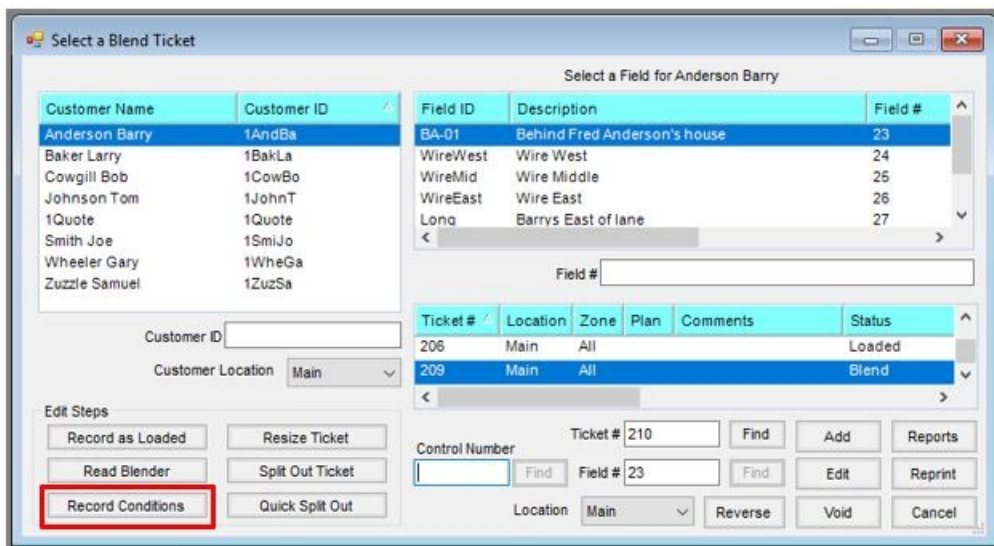

Last Modified on 01/06/2023 11:29 am CST

Q. How is the date and method of Clean Out recorded to meet Dicamba Federal Regulations?

A. At *Blending / Add a Blend Ticket* right click on the **Additional Info...** button and the Record Conditions window displays.

The Record Conditions window is also accessible from the Select a Blend Ticket window at *File / Open / Blend Ticket*. Highlight the desired blend ticket and click the Record Conditions button.

On the Record Conditions window, set the Date Applied and set the Rinse Out value to True.

The screenshot shows a software window titled "Record conditions For Ticket 210 and Field BA-01". The "Date Applied" field is set to "06/14/2019" and is highlighted with a red box. The "Rinse Out" dropdown menu is set to "True" and is also highlighted with a red box. The window contains various input fields for weather conditions, application parameters, and grower information. At the bottom right, there are "OK" and "Cancel" buttons.

Setting the Rinse Out field to True activates the Cleanout fields. Record the Method and Date for Before Application and After Application. If a Method is recorded, completing the Date field is required. The Before Application Date must be prior or equal to the Date Applied and the After Application Date must be equal to or after the Date Applied. Select **OK**.

This screenshot shows the same "Record conditions" window, but now the "Cleanout" section is active. The "Before Application" and "After Application" rows have their "Method" and "Date" fields filled in. The "Date Applied" field is now empty. The "OK" button at the bottom right is highlighted with a red box.
