SKY Soil Test Report

Last Modified on 07/08/2026 9:54 am CDT

The SKY Soil Test Report displays soil test results by point including a surface layer. The surface view can be updated in the *Layers* tab of Agvance SKY Mapping to reflect different legend values or color ramps.

1. Navigate to *Reports* and select the *SKY Soil Test Report*.

2. Select the desired Field(s).

   Note: Individual Events under each Field can also be selected. When multiple Events are selected, they will display per Field.

3. Choose the appropriate season from the *Season* drop-down under *Options*.
4. Select the desired Basemap imagery from the *Basemap* drop-down.
5. Optionally select the following report criteria:
   - **Crop** – Select to run the report for only the Crop selected on the chosen Field(s).
   - **Start / End Date** – Choose to include only Recs within the selected date range.
   - **Custom Imagery** – Select if custom drone imagery has been imported for the chosen Field.
   - **Sample Sites** – Choose to display sample sites along with the surface.
   - **Overview Map** – Select to add a boundary overview of the Field(s) to the report.
   - **Page Selection** – Choose specific nutrients to display per page.
6. Once all desired report criteria are selected, choose **Create Report**.

   Note: If no Events are available per the report criteria selected, a warning message displays, and the report fails to run.

7. The report displays in the *Reports Based on Field Selection* grid with a *Status* of *In Progress*. Choose **View Report**

to open the report.
