

AGIIS Web Services Setup

Last Modified on 12/19/2024 8:53 am CST

The AG Industry Identification System (AGIIS) Directory is a database system housing agricultural e-business data for industry subscribers. The AGIIS Customer Web Service allows Agvance users who subscribe to the AGIIS Directory access to the directory and the ability to download Grower and/or Product information. The web service returns demographic information as well as industry identifiers used in e-business transactions.

A subscription to the AGIIS Directory is required to access the information. SSI will provide the Enrollment Form to the potential subscriber. After subscribing to the AGIIS directory, the retailer will be issued a username and password to access the directory.

AGIIS Setup

1. Navigate to *Hub / Setup / Company Preferences*. Select **AGIIS Setup**.

The screenshot shows the 'Preferences' dialog box with the 'API' tab selected. The 'AGIIS Setup' button at the bottom left is highlighted with a red box. The 'General' sub-tab is active, showing options for login, mail host, and database connection. The 'Web API Database Connection Information' section includes a text field for 'API Database ID', a blue link 'Contact SSI Support to complete your setup', and buttons for 'Set Database ID' and 'Activate Mobile Sales'. The 'Mail Host' section has fields for 'Mail Host' (smtp.office365.com), 'Port' (587), and 'Use SSL' (checked). The 'Mail Host Email' section has fields for 'Address' and 'Password'. The 'Prop 65 Cancer Warning Statement' and 'Prop 65 Developmental Warning Statement' are displayed in text boxes. The 'AGIIS Setup' button is highlighted with a red box.

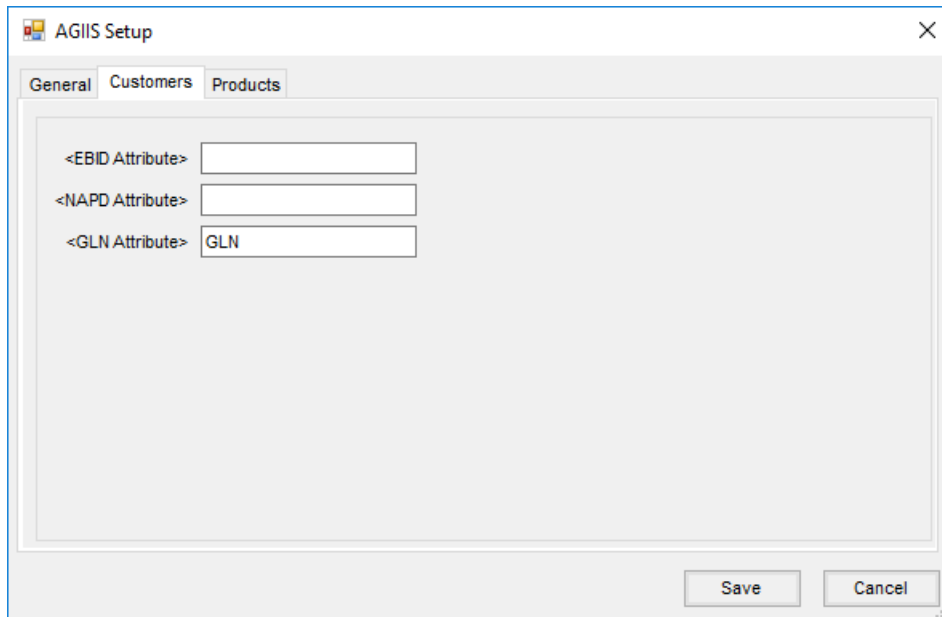

2. On the *General* tab of *AGIIS Setup* window, enter <https://www.agiis.org/services/AGIISWebServices.svc/AGIISWebServices.svc> in the *Search URL* field.
3. In the *User Logins* section, select the *Agvance User ID* and enter the retailer's AGIIS username and password for each User who will access the AGIIS Directory.

Note: Multiple Agvance Users can be listed under the same AGIIS username and password.

- On the *Customers* tab, double-click to select the *GLN Attribute* used to store the Customer's GLN (Global Location Number), which is an additional method of identifying producers in the Ag industry.

Note: The *EBID* and *NAPD Attributes* are not used at this time.

- The *Products* tab is optionally used if searching the AGIIS directory for Product information. However, using Agvance DataLink is the preferred method of updating Product information. Contact SSI Support for more information about DataLink.

Company EBID/IC Code

- Navigate to *Hub / Setup / Company*, and enter the *Retailer IC Code* associated with the AGIIS subscription.

Note: Contact SSI for the password to access this window.

Company Information

Name: Software Solutions Company

Address: 123 Any Street

City: Hometown State: IL Zip: 62565

Accessing the AGIIS Directory

Customers

After completing the setup requirements for accessing the directory, an **AGIS** button will be available on the *Profile* tab of the Customer master file. More information about using the directory can be found [here](#).

Products

The preferred method for updating Product information is through Agvance DataLink, available at *Hub / Transfers / Import / Agvance DataLink*. Contact SSI Support for more information about DataLink.
