

# Error 3028 - Network Connection Was Lost

Last Modified on 12/20/2022 10:54 am CST

**Q. I received 'Error 3028 – Network connection was lost.' How can I correct this issue?**

**A.** This error will occur if the workstation computer has lost connection to the server. Try this process:

1. Shut down workstations.
2. Reboot the server.
3. Bring the workstations back up.
4. Try to map a network drive from the workstation to the server.

If this fails, call your hardware dealer, as the network is not functioning properly.
