Error 530 While Printing from Agvance

Last Modified on 12/20/2022 11:42 am CST

Q. I received 'Error 530 - Printer Error' while printing a transaction from Agvance. How can I fix this issue?

A. This error can occur when the hard drive of the data server is lacking sufficient space. Agvance has to create temporary tables before printing some documents (like the Quick Check or the Payment on Account). If the server is low on hard drive space, then this error will eventually occur.

The solution is to clear up some hard drive space on the server.
