

# Logging Into Agvance - Error 3078

Last Modified on 12/20/2022 11:45 am CST

**Q. I received 'Error 3078 The Microsoft Jet database engine cannot find the input table or query 'salesmen!'. This error occurs while trying to access Agvance from any workstation. How can I fix this error?**

A. There is an *Agvance.mdb* in the data folder that is either corrupt or incomplete. We have seen this when a user exports an *Agvance Diskette* file into a data folder (you cannot export into the folder containing the data you are logged into, but you can export anywhere else). Removing or renaming the *Agvance.mdb* file should allow the user to successfully log into Agvance.
