

Restricted Use Pesticides Default County Setup

Last Modified on 06/24/2025 11:51 am CDT

Q. What is the significance of using the Setup Default Counties button for the Restricted Use Pesticides report?

A. The Restricted Use Pesticide report uses the default county established for sales if certain information is not available.

If a field is included on the Invoice, the report uses the county from the field record. If no county is established on the field, it uses the selected default county on the Restricted Use Pesticide report setup window.

If a field is not included on the Invoice, but a Ship-To address is included, the report uses the county from the Ship-To address record. If no county is established on the Ship-To address, it uses the selected default county on the Restricted Use Pesticide report setup window.

If no field or Ship-To address exists on the Invoice, the report uses the county from the customer or grower record. If no county is selected on the customer or grower record, it uses the established default county on the Restricted Use Pesticide report setup window.
