

Booking Quantity on Update Budget/Create Bookings Utility

Last Modified on 12/21/2022 9:00 am CST

Q. In the Energy module, how does the *Update Budget/Create Bookings* utility calculate the quantity for the Booking being created?

A. The prior season and current season delivered amounts and the *Minimum Quantity* from the *Setup* tab are compared. The largest of these three amounts is rounded to the nearest 50 or 100 gallons, based on the *Rounding Gallons* specified on the *Setup* tab, and used for the Booking quantity.
