

Scanning a Bar Code for a Delivery Ticket - Warehouse

Last Modified on 03/15/2023 8:39 am CDT

When searching for a Delivery Ticket in the *Outbound* area of the Warehouse app, a customer bar code may be scanned or the bar code can be scanned from a printed Delivery Ticket.

1. In the Warehouse app, tap **Outbound**.
2. In the *Search* area, choose the *Bar Code* option.
3. If the customer bar code is scanned, the app displays all tickets for that customer.
4. If the bar code is scanned from a printed Delivery Ticket, the corresponding ticket displays and may be edited.
