

# Dealer Order Window

Last Modified on 03/09/2022 11:54 am CST

## Overview

The Dealer Order provides tools to more effectively manage seed orders. In Agvance version 6.0.16390 and higher, it is possible to **Refresh** the Dealer Order and **Check Availability** on selected products for all vendors. Additionally, there is the capability to fill product shortages for **ONLY** the BAYER CropScience Vendor and order additional quantities for all suppliers. Other vendors (Winfield, Syngenta, and Dow) will manage location shortages within their own systems.

## Setup

**Refresh:** This will refresh the product quantities for the selected Dealer Order.

**Check Availability:** A product availability request will be sent for products tagged in the *Select* column. Availability will populate into the *Amt Available* column.

**Order:** Entering a quantity in the Requested Qty column and choosing **Order** sends an order request to the supplier.

- If product is in a short position, the **Order** button should only be used for the Bayer supplier.

**Note:** Attempting to order shorts for other suppliers will produce undesired results.

- For product in a short position for Bayer, selecting **Order** will send a request for that product then cancel the order. This results in new demand to fill the short.
- For product in a long position, choosing **Order** will send an order request to the supplier.
