

# Alternate GLN Setup

Last Modified on 01/20/2025 10:05 am CST

An Alternate Location GLN may be set up when utilizing web service ordering for crop protection and seed Products or when there is a conflict with Location GLNs between Vendors.

1. Within B2B Setup, navigate to *Setup / eBusiness*. In the *Locations* grid, set the *Code Type* and *Alternate Code Type* to *AGIIS-EBID*.
2. For Locations ordering crop protection and seed Products or where a GLN conflict exists, enter the appropriate (different) values in the *Value* and *Alt Value* columns.
3. For all other Locations, enter the same value in both the *Value* and *Alt Value* columns. Choose **Save**.

The screenshot shows the 'eBusiness Setup' window with the 'Locations' grid highlighted. The grid has columns for Location, Code Type, Value, <Cust ID>, Alt. Code Type, and Alt. Value. The 'Value' and 'Alt. Value' columns are highlighted with orange boxes. Below the grid are sections for Product Cross References, Customer Cross References, Vendor Cross References, Default Code Types, and Product Unit of Measure.

Location	Code Type	Value	<Cust ID>	Alt. Code Type	Alt. Value
100	AGIIS-EBID	11000****911		AGIIS-EBID	11000****138
200	AGIIS-EBID	11000****911		AGIIS-EBID	11000****911
300	AGIIS-EBID	11000****195		AGIIS-EBID	11000****195
BRVT	AGIIS-EBID	11000****989	MyB	AGIIS-EBID	11000****361

4. Once the *eBusiness Setup* is complete, navigate to the individual *B2B Setup* menus for each message type utilizing the *Alternate Code Type*. Within the *Setup* window, mark the appropriate Vendor line to send the *Alt Code Type* by checking the box in the *Use Alt. Location Code* column. Select **Save**.

◦ B2B messages that utilize the *Use Alt Location Code* option:

- Electronic Delivery Notifications
- Price Sheet/Cost Sheet
- Seed Orders
- Purchase Orders

**Note:** By default, the system uses the information set in the *Values* column across all message types. Once a message is flagged to *Use Alt. Location Code*, the system will now use the values in the *Alt. Value* column for all Locations utilizing that message.

	<Vendor>	URL	<Logins>	Connection	Code Type	Use Alt. Location Code
1	Winfield C...	ftp://at.usad...	*****	FTP	AssignedBySeller	<input checked="" type="checkbox"/>
