Reported vs. GIS Acres - Agvance SKY Mapping

Last Modified on 07/08/2026 1:57 pm CDT

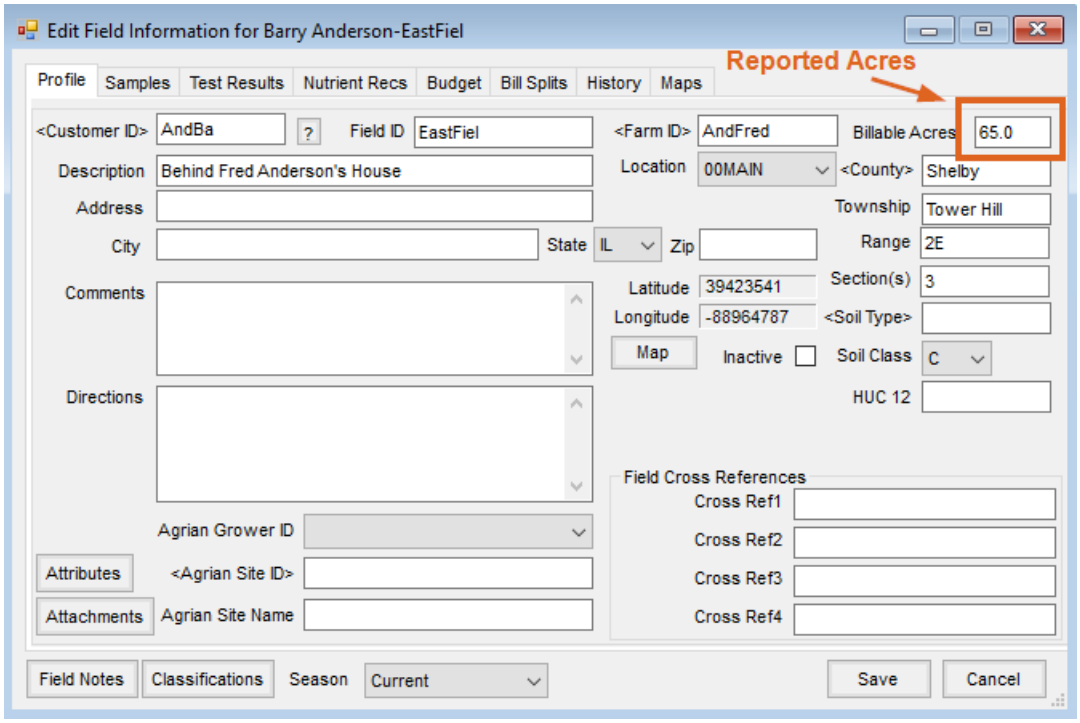

When making edits to a Field boundary in Agvance SKY Mapping edits will be made to the GIS Acres in Agvance.

1. Upon saving the Field, the *GIS Acres* will be updated in the Hub.

2. Agvance SKY Mapping will **not** update the Reported acres.
    - Reported Acres are the acres the Grower says are in the Field.

Note: Agvance SKY Mapping will default the GIS Acres into the Reported Acres for a new field created from Agvance SKY Mapping.
