

Reported vs. GIS Acres - SKY Mapping

Last Modified on 04/06/2022 2:47 pm CDT

When making edits to a field boundary in SKY Mapping edits will be made to the GIS Acres in Agvance.

1. Upon saving the field, the GIS Acres will be updated in the Hub

- 2. SKY Mapping will **not** update the Reported acres.
 - o Reported Acres are the acres the grower says are in the field.

The screenshot shows a software window titled "Edit Field Information for Barry Anderson-EastFiel". The "Profile" tab is selected and highlighted with a red box. The "Reported Acres" field is also highlighted with a red box and has a red arrow pointing to it. The "Acres" field contains the value "65.0". Other fields include Customer ID, Farm ID, Location, County, Township, Range, Section(s), Soil Type, and HUC 12.

Field	Value
<Customer ID>	1AndBa
Field ID	EastFiel
<Farm ID>	AndFred
Acres	65.0
Description	Barry's East Field
Location	Main
<County>	Shelby
Township	tower hill
Range	2E
Section(s)	3
<Soil Type>	
Latitude	39423541
Longitude	-88964787
State	IL
Zip	
Soil Class	
HUC 12	

Note: SKY Mapping will default the GIS Acres into the Reported Acres for a new field created from SKY Mapping.
