Link Agvance SKY Mapping Products to Agvance Windows Products

Last Modified on 07/08/2026 1:59 pm CDT

Agvance SKY Mapping Products can be linked to Products in the Hub.

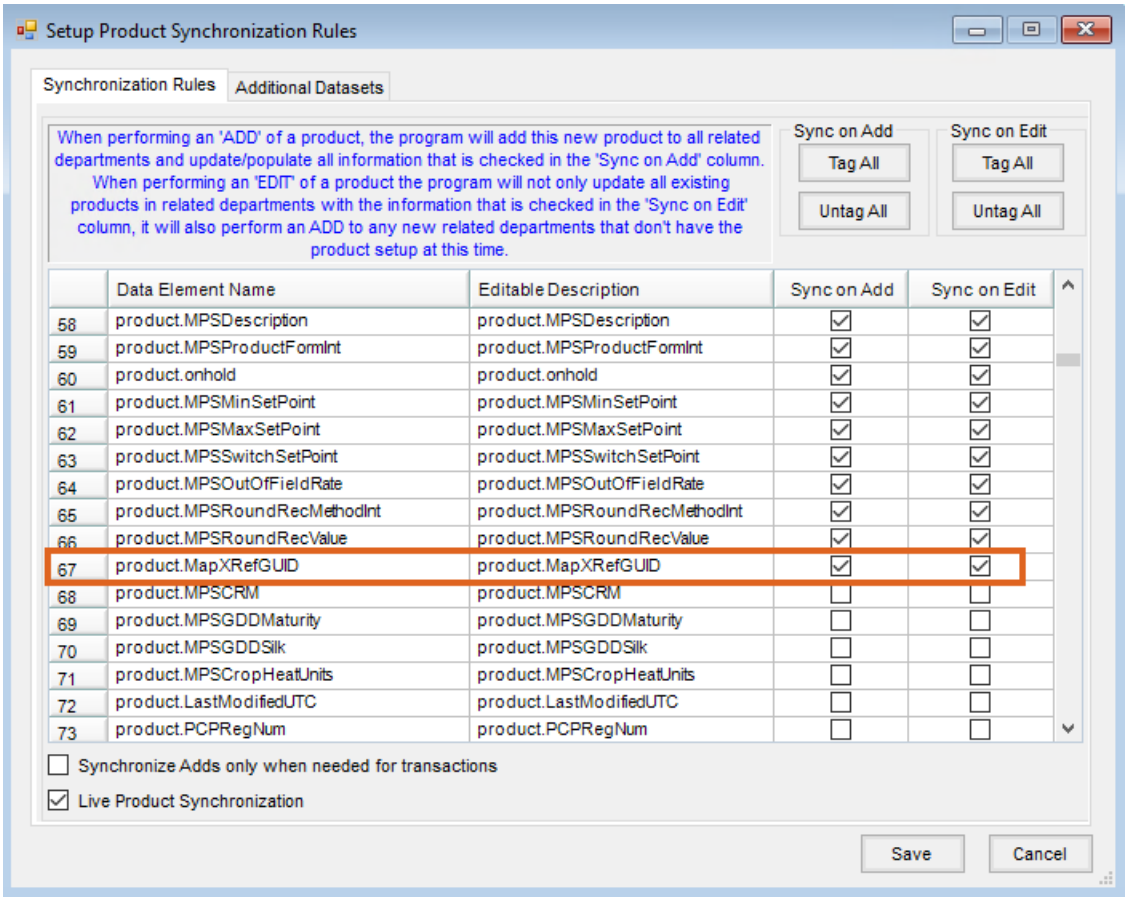

1. Navigate to the Product to link in Agvance Windows and choose **Edit**.
2. Double-click in the *<Agvance SKY Mapping Product Name>* field on the *Mapping Recs* tab.

   - If the Product is linked to an Agrian ID and the Agrian ID matches the one in Agvance SKY Mapping, the Product will automatically link.

     Note: Double-click in the *<Agvance SKY Mapping Product Name>* field to choose a different Product if needed.
   - If there is not an Agrian ID set up on the Product, choose the Agvance SKY Mapping Product to link to the Product.
3. Highlight the Product in the *<Agvance SKY Mapping Product Name>* field and use the **Delete** key on the keyboard to delete a linked Product.

Note: It is recommended to link Products in the master Location so if Product Sync Rules are set up, the information will be available in other Locations. Ensure *Line 67* on the *Setup Product Synchronization Rules* window found at *Hub / Setup* has both *Sync on Add* and *Sync on Edit* checked.

Additional Datasets
When performing an 'ADD' of a product, the program will add this new product to all related departments and update/populate all information that is checked in the 'Sync on Add' column. When performing an 'EDIT' of a product the program will not only update all existing products in related departments with the information that is checked in the 'Sync on Edit' column, it will also perform an ADD to any new related departments that don't have the product setup at this time.
