## Exporting Boundary Shapefiles from Agvance to Import Into SKY Mapping

Last Modified on 11/05/2024 8:43 am CST

The Agvance Hub offers an export utility that creates shapefile boundaries for any existing Field a Customer wants to import into SKY Mapping. The Export Shapefiles utility can be used to create multiple shapefile boundaries for numerous Customers at a time. When boundaries are exported using this utility, the files are formatted and ready to import into SKY Mapping.

- 1. Navigate to the API tab at Hub / Setup / Company Preferences.
- 2. Go to the Mapping Interface tab.
- 3. In the Export Shapefiles area, use the Browse button to navigate to the folder where the shapefile boundaries

should be exported and select OK. The Export Folder path will populate with the path selected.
