Product Reorder Dashboard

This dashboard honors user restrictions based on Product location.
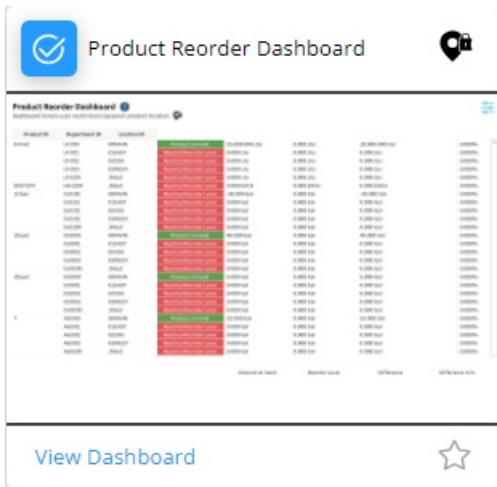

Purpose

The Product Reorder dashboard gives the ability to see if a location is close to running out of particular products based on which could be reordered or if products could be transferred from one location to another so as to not run out.

Details

The dashboard gives an overview of all products with the *Amount on hand* versus the *Reorder Level* defined. Filter by Department ID, Product ID, Sales Class, and more. An additional filter exists to filter products that have reached the Reorder Level.
