Personalize - SKY Dispatch

Last Modified on 02/06/2024 10:46 am CST

The *Personalize* tab allows the option to filter and choose which Locations' jobs are visible as well as choosing Applicators the user is responsible for tracking.
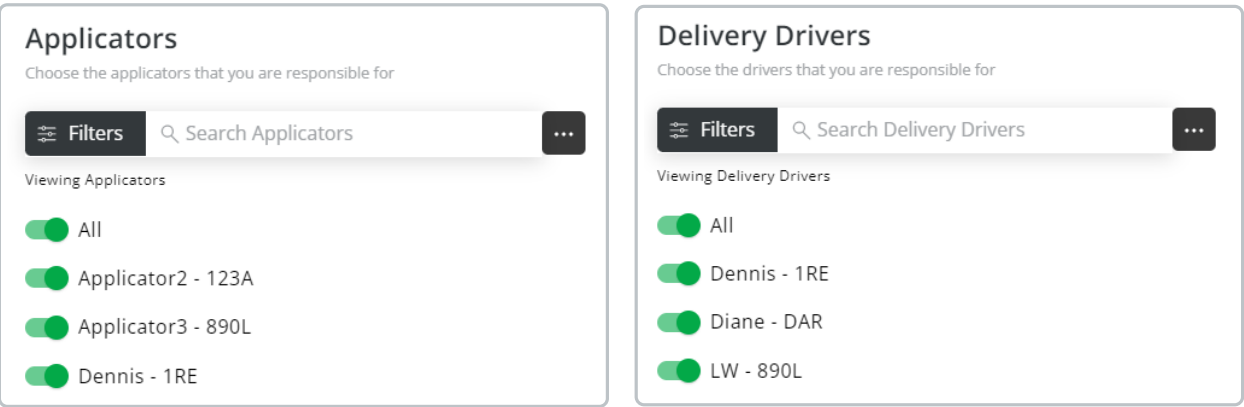

General

Use the **Ellipsis** to display *Applicators*, *Delivery Drivers*, or *Integrated Devices*.

Choose the Applicators/Delivery Drivers to display in the *Filters* menu of the *List View* or *Schedules* screens by turning the toggle switch(es) on or off.

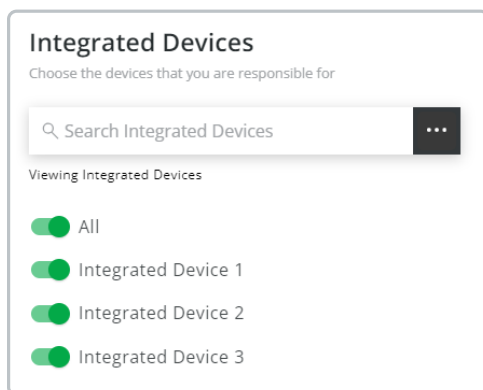

Applicators/Delivery Drivers can be filtered by selecting **Filters** in the search bar and choosing *Show All*, *Show All Turned On*, *Show All Turned Off*, or by specifying a *Location* from the drop-down. Once options here are indicated, choose **Apply Changes**. **Reset to Default** can be selected after changes have been applied to return to the default filters.

Toggles for the Integrated Devices determine which devices display on the map.

Locations

Filter locations by typing in the *Search* field. Choose the locations' jobs to view as options in the *Filters* menu by turning the toggle switch on or off.

Custom Filters

Create filters for *Crop*, *Crop Chemistry*, *Type of Work*, and/or *Ship via*. To add a new filter, select **+ New Crop Filter**, **+ New Crop Chemistry Filter**, **+ New Type of Work Filter**, or **+ New Ship Via Filter** and complete the necessary information. Select the **Trash Can** icon to remove any filters added.

Custom Filtering

Create only the filters you need. Categories with no custom filters won't show in the filter panel to save room.
