

# Update In-Transit Shipments Utility

Last Modified on 11/27/2024 1:46 pm CST

The In-Transit Shipment utility is a method to mass enter an In-Transit price for shipments that are In-Transit without the need to edit every shipment. The process will update the In-Transit price on the shipment so that when running the In-Transit Shipment report, the In-Transit value will come into the report.

Access the In-Transit Shipment utility by navigating to *Grain / Utilities / Update In-Transit Shipment*.

	Update	Commodity	Location	Shipment#	Shipment Date	Contract Detail Line#	Contract #	# of Units	In-Transit Price	Contract Type	Contract Futures Month	Contract Delivered Price
1	<input type="checkbox"/>	SB	Main00	1049	10/01/20...	1	4511	995.00	10.2400	Priced Later	Oct	0.0000
2	<input type="checkbox"/>	SB	Main00	1053	10/01/20...	1	4511	993.33	10.2400	Priced Later	Oct	0.0000
3	<input type="checkbox"/>	SB	Main00	1054	10/01/20...	1	4511	988.50	10.2400	Priced Later	Oct	0.0000

Filter

Tag All    Untag All

Select Location: All    Select

Select Commodity: All    Select

Include:

- Priced Later Shipments and Contracts
- Split Lines With Non-Priced Contract
- Split Lines With No Contract
- Split Lines With Priced Sales Contracts

Apply Defaults

In-Transit Price:     Set

Save    Cancel

While in the utility, select shipments to update by checking the *Update* checkbox or by selecting the **Tag All** button. Optionally filter by *Location* and/or *Commodity*.

- **Priced Later Shipments and Contracts** – Shipment split lines with a Priced Later Sales Contract
- **Split Lines with Non-Priced Contract** – Shipment split lines with any other type of Sales Contract and the *From DPR* of the shipment is not *Priced Later*.
- **Split Lines With No Contract** – Shipment split lines without a Sales Contract where the *In Transit* price on the shipment is zero and the *From DPR* of the shipment is not *Priced Later*.
- **Split Lines With Priced Sales Contracts** – Shipment split lines with a Priced Sales Contract where the *FOB Price* does not match the *In-Transit* price on the shipment and the *From DPR* of the shipment is not *Priced Later*.

**Note:** This option will update the *In-Transit* price to the *FOB* price on the Sales Contract.

Once the appropriate filters are set, tag the shipments to update. Set the appropriate *In-Transit* price in the *Apply Defaults In-Transit Price* field. Selecting **Save** will update the *In-Transit* prices of the selected shipments.
