Password Authorization Form

Last Modified on 08/19/2026 10:21 am CDT

There are two important password-protected utilities in Agvance. One is the user setup utility in the Hub and the other is a separate utility that can perform operations on the database itself through the SQL Server® program.

The Agvance User Setup utility located at *Hub / Setup / Users*, optionally requires a password as a user logs into the Agvance program. Employees with access to this utility may add and delete users, change passwords, and change user security levels. Because of this, it is important to control which employees have access to this utility.

Complete the form below indicating which users should have access to this utility. This information will be stored in SSI's records and only those individuals indicated will be provided the password to access this utility.

Note: This form requires the signature of the owner/manager of your location.
